$1^{\text {st }}$. Semester Examination 2000/2001 Academic Session

SEPTEMBER / OCTOBER 2000

## EAH324/3 - RIVER ENGINEERING

Time : [ 3 hours ]

## Instruction to candidates:-

1. This paper consists of SEVEN (7) questions. Answer FIVE (5) questions only.
2. Answers MUST BE written in Bahasa Malaysia.

Questions 1, 2 and 3 refer to the data as given in Tables 1 to 3 based on samplings done at Station SP2, Pari River, Ipoh on 2 December 1998 and 11 February 1999:

Table 1 Cross Sections

| Distance from Left Bank | Bed Elevation (m) |  |
| :---: | :---: | :---: |
| $(\mathbf{m})$ | 2 December 1998 | 11 February 1999 |
| 0.0 | 35.68 | 35.68 |
| 2.0 | 35.68 | 35.65 |
| 4.0 | 35.68 | 35.75 |
| 6.0 | 35.83 | 35.78 |
| 8.0 | 35.78 | 35.75 |
| 10.0 | 35.83 | 35.78 |
| 12.0 | 35.73 | 35.80 |
| 14.0 | 35.68 | 35.93 |
| 16.0 | 35.68 | 35.92 |
| 18.0 | 35.68 | 35.93 |
| Water Elevation $(\mathbf{m})$ | 37.03 | 36.34 |

Table 2 Bed Material

| Particle Size (mm) | \% Passing |  |
| :---: | :---: | :---: |
|  | 2 December 1998 | 11 February 1999 |
| 25.00 | 100.00 | 100.00 |
| 12.50 | 96.23 | 100.00 |
| 9.50 | 95.47 | 96.53 |
| 6.70 | 89.70 | 94.33 |
| 4.75 | 85.27 | 91.00 |
| 4.00 | 69.17 | 86.00 |
| 3.35 | 54.93 | 75.87 |
| 2.36 | 44.37 | 67.00 |
| 2.00 | 22.20 | 45.43 |
| 1.18 | 10.60 | 36.16 |
| 0.71 | 4.07 | 13.73 |
| 0.60 | 2.50 | 6.57 |
| 0.425 | 0.60 | 2.38 |
| 0.30 | 0.00 | 0.60 |
| 0.15 | 0.00 | 0.00 |

Table 3 Flow and Sediment Characteristics

| Data | 2 December 1998 | 11 February 1999 |
| :---: | :---: | :---: |
| $\mathrm{Q}\left(\mathrm{m}^{3} / \mathrm{s}\right)$ | 23.71 | 5.06 |
| $\mathrm{~B}(\mathrm{~m})$ | 18.0 | 18.0 |
| $\mathrm{Y}_{\mathrm{o}}(\mathrm{m})$ | 1.30 | 0.53 |
| $\mathrm{~V}(\mathrm{~m} / \mathrm{s})$ | 1.0 | 0.54 |
| $\mathrm{~S}_{\mathrm{o}}$ | 0.00125 | 0.00125 |
| $\mathrm{Q}_{\mathrm{T}}(\mathrm{kg} / \mathrm{s})$ | 6.04 | 4.0 |

1. (a) Sketch cross-sectional changes for both samplings. Estimate the maximum erosion or deposition if the design bed elevation is 35.18.
(b) Determine the mode of transport for both samplings.
(10 marks)
2. (a) Calculate bed load transport rate for the sampling done on 2 December 1998 using the following equations:

- Einstein-Brown
- Shields
(b) Estimate the total bed material load using Yang equation for the sampling done on 2 December 1998. Compute the discrepancy ratio for the equation.

3. (a) Determine the bedform for both samplings using diagram Shields. (10 marks)
(b) Compute the water elevation predicted by the following equations for the sampling carried out on 11 February 1999:

- Lacey
- Sugio

4. (a) Discuss TWO (2) effects on river equilibrium due to urbanisation. (10 marks)
(b) Discuss TWO (2) factors influencing the local scour around bridge piers.
5. Design a river channel with rigid concrete banks with the following flow and sediment characteristics:

| $\mathrm{Q}\left(\mathrm{m}^{3} / \mathrm{s}\right)$ | $35 \mathrm{~m}^{3} / \mathrm{s}$ |
| :---: | :---: |
| $\mathrm{D}_{50}(\mathrm{~mm})$ | 4 |
| Manning's $\mathrm{n}^{0.035}$ |  |
| $\mathrm{~S}_{\mathrm{o}}$ | 0.00125 |

The river reach has a rectangular cross section.
Apply the following two methods:

- Permissible Velocity based on Yang equation.
- Critical Shear Stress based on Shields diagram.

6. (a) Describe the following:
(i) regime concept
(ii) open system concept
(iii) genetic approach
(iv) Bankfull discharge
(v) sinusity
(10 marks)
(b) Clearly sketch the plan view and cross-section of a meandering river. Show all the features of a meandering river on the sketch and describe the formation process of all the features shown.
7. Describe the local, upstream and downstream effects resulting from the following projects:
(i) river straightening
(ii) dam construction
(20 marks)

Table A1: Diagram Shields (Van Rijn 1984)

| $\mathrm{D}_{\mathrm{gr}}$ | $\frac{\tau_{\mathrm{C}}}{\rho \mathrm{gg}\left(\mathrm{S}_{\mathrm{s}}-1\right) \mathrm{d}}$ |
| :---: | :---: |
| $\mathrm{D}_{\mathrm{gr}} \leq 4$ | $0.24 \mathrm{D}_{\mathrm{gr}}{ }^{-0.1}$ |
| $4<\mathrm{D}_{\mathrm{gr}} \leq 10$ | $0.14 \mathrm{D}_{\mathrm{gr}}{ }^{-0.64}$ |
| $10<\mathrm{D}_{\mathrm{gr}} \leq 20$ | $0.04 \mathrm{D}_{\mathrm{gr}}{ }^{-0.10}$ |
| $20<\mathrm{D}_{\mathrm{gr}} \leq 150$ | $0.013 \mathrm{D}_{\mathrm{gr}}{ }^{0.29}$ |
| $\mathrm{D}_{\mathrm{gr}}>150$ | 0.055 |

## Yang Equation (Sand River)

$$
\begin{aligned}
& \log \mathrm{C}_{\mathrm{T}}=5.435-0.286 \log \frac{\mathrm{~W}_{\mathrm{S}} \mathrm{~d}}{\mathrm{~V}}-0.457 \log \frac{\mathrm{U}_{*}}{\mathrm{~W}_{\mathrm{S}}} \\
& \quad+\left(1.799-0.409 \log \frac{\mathrm{~W}_{\mathrm{S}} \mathrm{~d}}{\mathrm{~V}}-0.314 \log \frac{\mathrm{U}_{*}}{\mathrm{~W}_{\mathrm{S}}}\right) \\
& \quad \times \log \left(\frac{\mathrm{VS}_{0}}{\mathrm{~W}_{\mathrm{S}}}-\frac{\mathrm{V}_{\mathrm{C}} \mathrm{~S}_{0}}{\mathrm{~W}_{\mathrm{S}}}\right) \\
& \text { di mana } \quad \mathrm{C}_{\mathrm{V}}(\mathrm{ppm})=\frac{\mathrm{C}_{\mathrm{T}}(\mathrm{ppm})}{\mathrm{S}_{\mathrm{S}}}
\end{aligned}
$$

Halaju kritikal, $\mathrm{V}_{\mathrm{C}}$ diberikan oleh :-

- $\frac{\mathrm{V}_{\mathrm{C}}}{\mathrm{W}_{\mathrm{S}}}=\frac{2.5}{\left(\log \frac{\mathrm{U}_{*} \mathrm{~d}}{\mathrm{~V}}-0.06\right)}+0.66$
bagi $\operatorname{Re}_{*}=\frac{U_{*} \mathrm{~d}}{\mathrm{~V}}=1.15-70$
- $\frac{\mathrm{V}_{\mathrm{C}}}{\mathrm{W}_{\mathrm{S}}}=2.05$ bagi $\mathrm{Re}_{*}>70$

Figure A2 Shields Diagram
