## ACKNOWLEDGEMENT

With earnest gratitude and appreciation, I would like to express my deepest and most heart-felt gratitude to my beloved parents and siblings for their unequivocal support throughout all the difficult situations during the period of my entire study.

It is my great pleasure to express my deepest appreciation and gratitude to my dedicated supervisor Dr. Low Siew Chun and co-supervisors Prof. Abdul Latif Bin Ahmad and Assoc. Prof. Lim Jit Kang for their excellent supervision, enormous effort spent in guiding, invaluable advice, practical view, and helping me throughout my PhD studies. My achievement of this research project is a reflection of prominent supervision works from my supervisors.

In particular, I would like to show my gratitude to all the laboratory technicians and administrative staff of the School of Chemical Engineering, Universiti Sains Malaysia for the assistance rendered to me.

On top of that, I would like to convey heartfelt gratitude and thanks to all my beloved friends and colleagues: Siew Hoong, Peck Loo, Man Kee, Wei Ming, Zhi Hua, Choon Ming, Hui Yen, Swee Pin, Sim Siong, Susan, Jing Yao, Huey Ping, Zeinab, Chuan Chun, Arthur, Qian Yee, Peng Chee, Atiah, and Wani for their encouragement, kindness and support towards me. Last but not least, the financial support given by Ministry of Higher Education (MOHE) and Universiti Malaysia Perlis (UniMAP) is gratefully acknowledged.

**NG QI HWA,**

**June 2016**

Abstract.....	xxvi
<b>CHAPTER 1 - INTRODUCTION</b>	
1.1 Potential of Membrane in Water Treatment.....	1
1.2 Nano-composite Membrane.....	3
1.3 Problem Statement.....	5
1.4 Objectives.....	8
1.5 Scope of Study.....	9
1.6 Organization of the Thesis.....	11
<b>CHAPTER 2 - LITERATURE REVIEW</b>	
2.1 Development of Membrane in Water Treatment.....	14
2.1.1 History.....	14
2.1.2 Classification of Membrane.....	16
2.2 Humic Substances.....	21
2.2.1 Properties of Humic Substances (HS) .....	22
2.2.2 Humic Acid (HA) .....	23
2.2.3 Humic Acid in Water and Wastewater.....	25
2.3 Humic Acid Removal Technology.....	26
2.3.1 Traditional Methods on Removal of Humic Acid and Its Problems... 27	
2.3.1(a) Flocculation.....	27
2.3.1(b) Oxidation Methods.....	28

	2.3.1(c) Electrochemical Methods.....	29
	2.3.2 Membrane Technology on Removal of Humic Acid.....	30
2.4	Membrane Fouling.....	32
	2.4.1 Membrane Fouling Analysis (Blocking Filtration Law).....	37
	2.4.2 Conventional Cleaning Methods to Mitigate Membrane Fouling.....	42
	2.4.2(a) Physical Cleaning Methods.....	43
	2.4.2(b) Chemical Cleaning Methods.....	45
	2.4.2(c) Drawbacks of Physical and Chemical Cleaning Methods..	47
2.5	Alternative Methods to Mitigate Membrane Fouling.....	47
	2.5.1 Membrane Surface Modification.....	48
	2.5.2 Nano-composite Membrane.....	50
	2.5.2(a) Titanium Dioxide (TiO <sub>2</sub> ) based Nano-composite Membrane.....	51
	2.5.2(b) Zeolite based Nano-composite Membrane.....	52
	2.4.2(c) Magnetite Nanoparticles based nano-composite Membrane.....	53
2.6	Stimuli Responsive Membrane.....	54
	2.6.1 Membrane Indirect Stimulated by Thermodynamic Environment....	55
	2.6.2 Membrane Direct Stimulated by Chemical Cues.....	56
	2.6.3 Membrane Stimulated by a Specific External Electromagnetic Field Signal.....	57
2.7	Quartz Crystal Microbalance with Dissipation Monitoring (QCM-D).....	58
	2.7.1 QCM Technique.....	59
	2.7.2 Dissipation Factor.....	62
	2.7.3 Some Common QCM-D Applications.....	63
2.8	Future Direction of Study.....	65

## CHAPTER 3 - MATERIALS AND METHODOLOGY

3.1	Raw Materials and Chemicals.....	69
	3.1.1 Raw Materials.....	69
	3.1.2 Chemicals.....	69
3.2	Surface Modification of Magnetite Nanoparticles.....	71
3.3	Development of Magnetophoretic Actuation Composite Membranes.....	72

3.3.1	Quantitative Measurement of the Adsorbed F-MNPs and HA Foulants on Modified or Neat PES Membranes via Quartz Crystal Microbalance with Dissipation (QCM-D).....	72
	3.2.1(a) Adsorption Kinetics of F-MNPs.....	73

		<b>Page</b>
Plate 3.1	The photograph of the dead-end filtration test rig.	84
Plate 3.2	The photograph of the cross-flow filtration test rig.	89
Plate 4.1	TEM images showing (a) bare MNPs, and (b) RuO <sub>4</sub> vapor stain F-MNPs.	103
Plate 4.2	FESEM micrographs (Accelerating Voltage: 5 kV and Magnification: 20,000) for top surface of samples A (Neat MF PES membrane, P1), B (PDDA-PSS-PES membrane, P2), and C (2500ppm F-MNPs-PDDA-PSS-PES membranes, P5).	121
Plate 4.3	Three-dimensional surface AFM images of samples A (Neat MF PES membrane, P1), B (PDDA-PSS-PES membrane, P2), and C (2500 ppm FMNPs-PDDA-PSS-PES membrane, P5).	124
Plate 4.4	FESEM micrographs (Accelerating Voltage: 5 kV and Magnification: 10,000) for cross section of samples A (Neat MF PES membrane, P1), B (PDDA-PSS-PES membrane, P2), and C (2500 ppm F-MNPs-PDDA-PSS-PES membrane, P5).	131
Plate 4.5	FESEM micrographs (Accelerating Voltage: 5 kV and Magnification: 20,000) for top surface of samples A (P3), B (P4), and C (P5).	135
Plate 4.6	Three-dimensional surface AFM images of samples A (P3), B (P4), and C (P5).	137
Plate 4.7	SEM–EDS line-scan profile (Accelerating Voltage: 20 kV and Magnification: 5,000) across the membrane surface at two different regions illustrating the Fe <sub>3</sub> O <sub>4</sub> distribution pattern on 2500 ppm F-MNPs-PDDA-PSS-PES membrane (P5).	139
Plate 4.8	Membrane top surface area mapping under magnification of 1,000, illustrating the Fe <sub>3</sub> O <sub>4</sub> distribution pattern on (a) 100 ppm F-MNPs (P3), (b) 1000 ppm F-MNPs (P4), and (c) 2,500 ppm F-MNPs (P5) coated membranes.	140
Plate 4.9	FESEM micrographs (Accelerating Voltage: 5 kV and Magnification: 20,000) for top surface of neat MF PES membrane (P1) used to filter 50 mg L <sup>-1</sup> HA solution for 48	180

hours (a) clear membrane and (b) fouled membrane.

Plate 4.10 FESEM micrographs (Accelerating Voltage: 5 kV and Magnification: 20,000) for top surface of neat UF PES membrane used to filter 50 mg L<sup>-1</sup> HA solution for 48 hours (a) clear membrane and (b) fouled membrane. 182

Plate 4.11 FESEM micrographs (Accelerating Voltage: 5 kV and Magnification: 20,000) for top surface of magnetophoretic actuation composite membrane (P5) used to filter 50 mg L<sup>-1</sup> HA solution for 48 hours (a) clear membrane and fouled membrane operated (b) without and (c) with the oscillating magnetic field. 183

## LIST OF ABBREVIATIONS

AFM	Atomic force microscopy
BSA	Bovine serum albumin
CAB	Cellulose acetate butyrate
CIP	Clean-in-place
DBPs	Disinfection by-products
DI	Deionized
DLS	Dynamic light scattering
EC	Electrocoagulation
EDS	Energy dispersive spectroscopy
EO	Electro-oxidation
FA	Fulvic acid
FESEM	Field emission scanning electron microscopy
F-MNPs	Functionalized-magnetite nanoparticles
HA	Humic acid
HAAs	Haloacetic acids
HCl	Hydrochloride acid
HS	Humic substance
IR	Infrared
LCST	Lower critical solution temperature
MF	Microfiltration
MNPs	Magnetite nanoparticles
MWCO	Molecular weight cut-off
NaOH	Sodium hydroxide

NF	Nanofiltration
NMP	N-methyl-pyrrolidone
NOM	Natural organic matter
P(St-AA-NVP)	Poly(styrene-acrylic acid-N-vinylpyrrolidone)
PA	Polyamide
PAI	Polyamideimide
PDDA	Poly(diallyldimethylammonium chloride)
PEM	Polyelectrolyte multilayer
PES	Polyethersulfone
PLC	Programmable logic controller
PMAA	Poly(methacrylic acid)
PNIPAAm	Poly(N-isopropylacrylamide)
PSS	Poly(sodium-4-styrene sulfonate)
PVDF	Polyvinylidene fluoride
PVP	Poly(N-ethyl-4-vinylpyridinium bromide)
QCM-D	Quartz crystal microbalance with dissipation
RO	Reverse osmosis
SDI	Slit density index
SSR	Sum of squared residuals
TEM	Transmission electron microscopy
TFC	Thin film composite
TGA	Thermogravimetric analysis
THMs	Trihalomethanes
TOC	Total organic carbon
TSP	Trisodium phosphate

UF	Ultrafiltration
UV	Ultraviolet
VSM	Vibrating sample magnetometer
WHO	World health organization
WM	With external oscillating magnetic field
WOM	Without external oscillating magnetic field
XPS	X-ray photoelectron spectroscopy
XRD	X-ray diffraction

## LIST OF SYMBOLS

$A$	Effective membrane area
$\hat{A}$	Amplitude
$B$	Magnetic field strength
$C$	Mass sensitivity constant of the QCM-D
$C_p$	Permeate concentration
$C_F$	Feed concentration
$C_{cr}$	Specific critical salt concentration
$D$	Dissipation factor
$\Delta D$	Change in the dissipation factor
$E_{dissipated}$	Dissipated energy
$E_{stored}$	Energy stored in the oscillating quartz crystal
$f$	Resonant frequency
$\Delta f$	Change in frequency
$h_0$	Thickness of the crystal
$h_1$	Film thickness
$Ha$	Hartmann number
$J$	Membrane flux at time $t$
$J_0$	Membrane initial flux
$k$	Fouling coefficient
$K_b$	Complete pore blocking coefficient
$K_c$	Cake filtration constant
$K_i$	Intermediate pore blocking coefficient
$K_s$	Standard pore blocking coefficient

$L$	Characteristic length scale
$M_s$	Saturation magnetizations
$\Delta m$	Change in mass adsorbed per unit surface of the quartz crystal surface
$n$	Dimensionless filtration constant
$\eta$	Overtone number
$\eta_1$	Film viscosity
$\eta_3$	Viscosity of the bulk liquid
$\rho_0$	Density of the crystal
$\rho_1$	Film density
$\rho_3$	Density of the bulk liquid
$R$	Rejection percentage
$R_a$	Mean roughness parameter
$Re$	Reynold number
$R_q$	Root mean square roughness parameter
$R_z$	Mean difference between five highest peaks and lowest valleys
$t$	Time
$\tau$	Decay time
$U_E$	Electrophoretic mobility
$\mu$	Dynamic viscosity
$\mu_1$	Film elasticity
$V$	Cumulative volume of filtrate
$V_{max}$	Maximum volumetric capacity
$V$	Filtrate volume collected through an available membrane area
$\omega$	Angular frequency of the oscillation
$\dot{\gamma}$	Shear rate
