

**DESIGN AND MODELING OF QUASI-LUMPED
PLANAR INVERTED-F ANTENNA FOR
HANDHELD DEVICES**

MAJID RAFIEE

UNIVERSITI SAINS MALAYSIA

2016

This work is dedicated to my beloved wife, devoted mother, merciful father and
lovely son.

**DESIGN AND MODELING OF QUASI-LUMPED PLANAR
INVERTED-F ANTENNA FOR HANDHELD DEVICES**

by

MAJID RAFIEE

**Thesis submitted in fulfillment of the requirements
for the degree of
Doctor of Philosophy**

February 2016

ACKNOWLEDGEMENTS

First and foremost, praise be to God, the most gracious and the most merciful. Without His blessing and guidance my accomplishments would never have been possible. I would like to express my deepest gratitude to my advisor, Dr. Aftanasar bin Md. Shahar and co-supervisor, Professor Dr. Mohd Fadzil Ain for their excellent guidance, caring, patience, and providing me with an excellent atmosphere for doing research. I could not have imagined having better advisors and mentors for my Ph.D study. Dr. Aftanasar bin Md. Shahar has this potential to devise a research topic with feasible foreseeable future results output. I sincerely desire his extent of patience and attributes of not given up on a student even in a hopeless situation until he turns them to a success story. He has demonstrated this attribute a number of times. He responds to questions, discussion, and review of write-ups either article or thesis almost instantly. Professor Dr. Mohd Fadzil Ain is not different either. He has a sense of humor that naturally dissipates and diffuses your pressure and stress in no time as you discuss the challenges of your work with him with much concern. They are simply amazing and good compliments.

I am greatly indebted to my wife, Farnaz Afkhami Aghda. As soon as I left Iran, you single handedly took up the challenges of taking over my responsibilities, first to you, my child, and finally, my parents. This I cannot thank you enough. I also want to thank my son, Ryan. I truly know how it feels to miss ones parents particularly at that formative years-Thank you! I specially want to thank my parents. With attainment of this degree, I perceived I have adequately fulfills my mum's dream toward my education.

I would like to express many thanks to all of the School Electrical and Electronic

Engineering office staffs, particularly, Mrs. Normala Omar and Mr. Mohd Rahmat Bin Arifin for their invaluable help during my study.

My sincere thanks also goes to technicians; Mr. Abdul Latip Hamid, Mr Elias Zainuddin and Mdm Zammira Khairuddin for their assistance and providing technical support in the Communications and PCB laboratory. I would like also to thank Universiti Sains Malaysia (USM), Institute of Postgraduate Studies (IPS) and School of Electrical & Electronics for providing the opportunity and supporting my research project through USM fellowship award and Teaching and Learning Assistant scheme (T&L) and Grants under project numbers 1001/PELECT/814202 USM RUT and 1001/PELECT/854004 USM RUT.

CHAPTER 1 – INTRODUCTION	
1.1 Background	1
1.2 Problem statement	4
1.3 Aims and Objectives	7
1.4 Scope of Research	8
1.5 Limitations of Research	9
1.6 Thesis Contribution.....	9
1.7 Thesis Outline	10
CHAPTER 2 – LITERATURE REVIEW	
2.1 Introduction	13
2.2 Theoretical Background	14
2.2.1 Long Term Evolution (LTE)-Advanced Evolution Review	14
2.2.2 Review of More Conventional Mobile Antennas in the Market	15
2.2.2(a) Antenna Prerequisites to Be Used as a Mobile Antenna .	15
2.2.2(b) Planar Inverted-F Antenna (PIFA) Evolution as an Internal Antenna for Mobile Devices	17

2.2.2(c)	Specific Absorption Ratio (SAR) Standard for Near-Body Antennas	23
2.2.3	Lumped and Quasi-Lumped Elements Used in Microwave Applications	26
2.3	Design Modeling of PIFA and Quasi-Lumped Elements	29
2.3.1	PIFA Modeling as a Radiating Element	29
2.3.2	PIFA Modeling as a Resonating Element	32
2.3.3	PIFA Equivalent Circuit Modeling	33
2.3.3(a)	Input Current Calculation of a Single Band PIFA	36
2.3.3(b)	Input Voltage Calculation of a Single Band PIFA	37
2.3.3(c)	Input Impedance Calculation of a Single Band PIFA	38
2.3.3(d)	Analyzing of Shorting Pin in PIFA	40
2.3.4	Quasi-Lumped Elements Modeling	42
2.3.4(a)	Equivalent Circuit Modeling of a Parasitic Capacitor	44
2.3.4(b)	Equivalent Circuit Modeling of an Interdigital Capacitor	47
2.3.4(c)	Equivalent Circuit Modeling of a Quasi-Inductor	57
2.4	Conventional PIFA Antennas	60
2.4.1	Conventional PIFA Antennas Feeding Structure	60
2.4.2	Conventional single element PIFA antenna	60
2.4.3	Conventional PIFA Antennas as a MIMO Antenna	62
2.4.3(a)	Effect of Spatial Diversity on Correlation in MIMO Configuration	63
2.4.3(b)	Effect of Pattern Diversity on Correlation in MIMO Configuration	63
2.4.3(c)	Effect of Polarization Diversity on Correlation in MIMO Configuration	64
2.5	Summary	65
 CHAPTER 3 – METHODOLOGY		
3.1	Introduction	66

3.2	Parameters and Design Principles of CPW-Fed Quasi-Lumped PIFA Antenna	70
3.2.1	The Principle of the Feeding Structure.....	70
3.2.2	Quasi-Lumped Elements Configuration Parameters of quasi-lumped PIFA.....	71
3.3	Capacitors of Proposed CPW-Fed Quasi-Lumped PIFA Antenna	72
3.3.1	Capacitance of Parasitic Capacitor, C_P	72
3.3.1(a)	Charge per Unit on the Connected Narrow Transmission Line(Q')	74

3.8.5	Defining of Boundary Conditions	103
3.8.6	Settings for Far-Field Monitor.....	103
3.8.7	Transient Solver as the Main Solver in CST.....	104
3.8.8	Impedance Calculator Toolbox	104
3.8.9	Specific Absorption Ratio (SAR)	105
3.8.10	Total Active Reflection Coefficient (TARC) Calculation for CPW-Fed Quasi-Lumped PIFA MIMO Antenna.....	106
3.8.11	Mean Effective Gain (MEG) Calculation for CPW-Fed Quasi-Lumped PIFA MIMO Antenna	106
3.8.12	Diversity Gain (DG) Calculation for CPW-Fed Quasi-Lumped PIFA MIMO Antenna.....	110
3.9	Measurements Setup of CPW-Fed Quasi-Lumped PIFA Antenna	110
3.9.1	S-Parameter Measurement Setup.....	110
3.9.2	Antenna Radiation Pattern Measurement Setup	111
3.9.3	Gain Measurement Procedure	113
3.9.4	Envelope Correlation Coefficient (ECC) Calculation	115
3.9.5	Mean Effective Gain (MEG) Calculation	119
3.9.6	Total Active Reflection Coefficient (TARC) Calculation	121
3.10	Summary.....	122

CHAPTER 4 – PARAMETRIC DISCUSSION

4.1	Equivalent Circuit Model of Single Element CPW-Fed Quasi-Lumped PIFA Antenna Using Advanced Design System (ADS)	124
4.2	Effect of Open Stub on Antenna’s Frequency and Bandwidth	129
4.2.1	Effects of Open Stub capacitance(C_{OS}) Variations on Quasi-Lumped PIFA Antenna’s Operating Frequency and Bandwidth	129
4.2.2	Effects of Open Stub Inductance (L_{OS}) Variations on Quasi-Lumped PIFA Antenna’s Operating Frequency and Bandwidth	130
4.2.3	Summary on the Effect of Open Stub on the Antenna Performance	132

4.3	Effects of Interdigitated Capacitance (C_I) and Its Subcomponents Variations on Quasi-Lumped PIFA Antenna's Operating Frequency and Bandwidth	135
4.3.1	Effects of Series Inductance (L_{Series}) variations on Quasi-Lumped PIFA's Operating Frequency and Bandwidth	135
4.3.2	Effects of Series Resistance (R_{Series}) variations on Quasi-Lumped PIFA's Operating Frequency and Bandwidth	136
4.3.3	Effects of Interdigitated Capacitance (C_I) Variations on Quasi-Lumped PIFA Antenna's Operating Frequency and Bandwidth	136
4.3.4	Summary on the effect of using IDC	140
4.4	Effects of Parasitic Capacitance (C_P) Variations on Quasi-Lumped PIFA Antenna's Operating Frequency and Bandwidth	140
4.5	Effects of Short-Circuited Inductance (L_{SC}) Variations on Quasi-Lumped PIFA Antenna's Operating Frequency and Bandwidth	142
4.6	Summary	143

CHAPTER 5 – RESULTS AND DISCUSSION

5.1	Introduction	144
5.2	Modeling, Simulation and Measurement Results	144
5.2.1	The Single-Element CPW-Fed Quasi-Lumped PIFA Antenna Configuration	144
5.2.1(a)	Modeled, Simulated and Measured Reflection Coefficient of Single-Element Quasi-Lumped PIFA	145
5.2.1(b)	Simulated Smith Chart of Single-Element CPW-Fed Quasi-Lumped PIFA Antenna	148
5.2.1(c)	Modeled, Simulated and Measured Voltage Standing Wave Ratio (VSWR) of Single-Element Quasi-Lumped PIFA	149
5.2.1(d)	Modeled, Simulated and Measured Mismatch Loss (ML) of Single Element Quasi-Lumped PIFA	149
5.2.1(e)	Simulated and Measured Radiation Pattern of Single Element CPW-Fed Quasi-Lumped PIFA Antenna	151
5.2.1(f)	Simulated Surface Current Distribution of Single Element Quasi-Lumped PIFA	153

5.2.1(g)	Simulated and Measured Gain of Single Element CPW-Fed Quasi-Lumped PIFA Antenna	155
5.2.1(h)	Simulated Specific Absorption Ratio (SAR) of Single Element Quasi-Lumped PIFA Antenna	156
5.2.2	The Dual-Element CPW-Fed Quasi-Lumped PIFA MIMO Antenna Configuration	160
5.2.2(a)	Equivalent Circuit Model of Dual-Element CPW-Fed Quasi-Lumped PIFA MIMO Antenna Using Advanced Design System (ADS)	160
5.2.2(b)	Modeled, Simulated and Measured Reflection Coefficient And Mutual Coupling of Dual-Element CPW-Fed Quasi-Lumped PIFA MIMO Antenna	162
5.2.2(c)	Modeled, Simulated and Measured Voltage Standing Wave Ratio (VSWR) of Dual-Element Quasi-Lumped PIFA MIMO Antenna	165
5.2.2(d)	Modeled, Simulated and Measured Mismatch Loss (ML) of Dual-Element Quasi-Lumped PIFA MIMO Antenna	166
5.2.2(e)	Simulated and Measured Radiation Pattern of Dual-Element Quasi-Lumped PIFA MIMO Antenna	168
5.2.2(f)	Simulated Current Surface of Dual-Element Quasi-Lumped PIFA MIMO Antenna	168
5.2.2(g)	Simulated Specific Absorption Ratio (SAR) of Dual-Element Quasi-Lumped PIFA MIMO Antenna at Its Operating Frequency	170
5.2.2(h)	Modeled, Simulated and Measured Total Active Reflection Coefficient (TARC) of Dual-Element Quasi-Lumped PIFA MIMO Antenna	171
5.2.2(i)	Modeled, Simulated and Measured Envelop Correlation Coefficient (ECC) of Dual-Element Quasi-Lumped PIFA MIMO Antenna	173
5.2.2(j)	Simulated Mean Effective Gain (MEG) of Dual-Element Quasi-Lumped PIFA MIMO Antenna	174
5.2.2(k)	Modeled, Simulated and Measured Diversity Gain (DG) of Dual-Element Quasi-Lumped PIFA MIMO Antenna	175
5.3	Comparison of Proposed Quasi-Lumped PIFA Antenna With Conventional PIFA Antennas	176

5.3.1	Comparison of Single-Element CPW-Fed Quasi-Lumped PIFA Antenna With Conventional PIFA Antennas.....	176
5.3.2	Comparison of Dual-Element Quasi-Lumped PIFA MIMO Antenna With Conventional PIFA Antennas.....	176
5.4	Summary	179

CHAPTER 6 – CONCLUSION AND FUTURE WORK

6.1	Conclusion	180
6.2	Suggestions for future works.....	185
6.2.1	Modification for other devices.....	185
6.2.2	Higher order of MIMO antenna	185
6.2.3	Multi-frequency	186
6.2.4	Next Generation Systems and Other Devices.....	186
