EFFECTS OF RH-WMA ADDITIVE ON THE RHEOLOGICAL PROPERTIES OF RECLAIMED ASPHALT BINDERS AND THE ENGINEERING PROPERTIES OF RECYCLED MIXTURES

by

LILLIAN @ LILIA GUNGAT

Thesis submitted in fulfillment of the
requirements for the degree of
Doctor of Philosophy

March 2017

I would like to dedicate this thesis to my beloved husband, Teo Jeck Hoe for his unconditional love and moral support, to my parents for their prayer and encouragement and also to my lovely children Clement, Adriel and Sarah Elina for all your patience and support during mommy's Ph.D studies.

ACKNOWLEDGEMENTS

First of all, I praise God for His grace and mercy that granting me the capabilities to proceed successfully. This thesis appears in its current form due to the assistance and guidance of several people. I would like to offer my sincere thanks to all of them.

I would like to express my utmost sincere thanks to my esteemed supervisor, Professor Dr Meor Othman Bin Hamzah for his guidance, motivation and endless supports during my study. I also would like to express my deepest thanks to my co-supervisor Dr Nur Izzi Bin Md Yusoff and Dr Goh Shu Wei for their guidance, valuable comments and willingness to help me to complete this thesis.

I would like to sincerely thank to every organization and individual who lend me hand in completing this study especially Universiti Malaysia Sabah and Ministry of Higher Education, Malaysia for the financial support. I am also indebted to the technicians of Highway Engineering Laboratory, Universiti Sains Malaysia, Mr. Mohd Fouzi Bin Ali and Mr. Zulhairi Bin Ariffin for their excellent support, co-operation and guidance throughout my laboratory works. Furthermore, I would like to acknowledge Mr. Mohd. Shahrom Zakaria a senior engineer at Kuad Kuari Sdn. Bhd. for providing useful information on reclaimed asphalt pavement in Malaysia. I would like to express my gratitude to my lab mates Noor Halizah for knowledge sharing, encouragement and assistance during my study.

A special thanks to my family for their unconditional moral support and love throughout my study. The existence of this thesis is possible because of your support, prayer and encouragement.

Keep your eyes on the stars, and your feet on the ground

Theodore Roosevelt

CHAPTER ONE: INTRODUCTION		
1.1	Background	1
1.2	Problem Statement	3
1.3	Objectives of Research	5
1.4	Significance of the Research	6
1.5	Scope of Work	7
1.6	Thesis Organization	8
CHAPTER TWO: LITERATURE REVIEW		
2.1	Introduction	10
2.2	Reclaimed Asphalt Pavement	10
2.3	Warm Mix Asphalt	14
	2.3.1 Classification of WMA Technology	15
	2.3.2 Benefits and Drawbacks of WMA	18
2.4	Background of Reclaimed Asphalt Pavement with WMA	19
2.5	Benefits of Reclaimed Asphalt Pavement with WMA	21
	2.5.1 Reduction of Production Temperature	21

2.5.2 Improvement of Workability and Blending 22
2.6 Properties of Asphalt Binder Containing Reclaimed Asphalt and WMA 25
2.6.1 Empirical Properties 25
2.6.2 Rheological Properties 26
2.6.3 Rheological Properties at High Temperatures 27
2.6.4 Rheological Properties at Intermediate Temperatures 31
2.6.5 Rheological Properties at Low Temperatures 31
2.6.6 Physicochemical Properties 32
2.7 Storage Stability 35
2.8 Characterization of Reclaimed Asphalt Pavement Materials 36
2.8.1 Gradation of Reclaimed Asphalt-Aggregate 38
2.8.2 Warm Mix Asphalt Additive 38
2.8.3 Binder Content of Reclaimed Asphalt 40
2.8.4 Mixing and Compaction Temperatures 42
2.9 Laboratory Studies of Reclaimed Asphalt Pavement and WMA 45
2.9.1 Resistance to Rutting 45
2.9.2 Resistance to Moisture Damage 50
2.9.3 Resistance to Fatigue 53
2.10 Field Studies of Reclaimed Asphalt Pavement and WMA 57
2.11 Evaluation of Pavement Sustainability Related to Reclaimed Asphalt Pavement and WMA 60
2.12 Summary 62

CHAPTER THREE: METHODOLOGY

3.1 Introduction 64
3.2 Materials 64
3.2.1 Asphalt Binder 64
3.2.2 Aggregate 64
3.2.3 Filler 65
3.2.4 WMA Additive 66

3.2.5 Reclaimed Asphalt Pavement 66
3.3 Preparation of Asphalt Binder Modified with RH-WMA Additive 68
3.4 Processing of Reclaimed Asphalt Pavement 68
3.4.1 Extraction and Recovery of Reclaimed Asphalt Binder 70
3.4.2 Processing and Fractionation of Reclaimed Asphalt 71
3.5 Preparation of Recycled Asphalt Binder Blends and RH-WMA Additive 73
3.6 Experimental Design 74
3.7 Physical Tests and Aging Methods 77
3.8 Storage Stability Test 78
3.9 Chemical Tests 78
3.9.1 Differential Scanning Calorimetry 78
3.9.2 Fourier Transform Infrared 79
3.10 Brookfield Rotational Viscometer Test 80
3.11 Dynamic Shear Rheometer Test 82
3.11.1 Temperatures Sweeps Test 84
3.11.2 Frequency Sweeps Test 85
3.11.3 Multiple Stress Creep and Recovery 86
3.12 Rheological Model 88
3.13 Mix Design and Optimization 93
3.13.1 Determination of Reclaimed Asphalt Binder in the Design Mix 94
3.13.2 Mixing Procedures of Reclaimed Asphalt Pavement with Virgin Materials 95
3.13.3 Design of Experiment 96
3.13.4 Specimen Preparation and Laboratory Tests 99
3.13.5 Statistical Analysis 100
3.13.6 Determination of the Optimum Binder Content 101
3.13.7 Mathematical Optimization 101
3.14 Evaluation of Mixture Performance 105
3.14.1 Indirect Tensile Strength Test 106
3.14.2 Resilient Modulus Test 106

3.14.3 Dynamic Creep Test 107

3.14.4 Diametral Fatigue Test 108

CHAPTER FOUR: PHYSICAL, CHEMICAL AND RHEOLOGICAL CHARACTERIZATION OF ASPHALT BINDERS INCORPORATING RECLAIMED ASPHALT WITH RH-WMA ADDITIVE

4.1 Introduction 112

4.2 Physical Properties of Asphalt Binder Containing RH-WMA Additive 114

4.3 Chemical Analysis of RH-WMA Additive 115

4.3.1 DSC Analysis 115

4.3.2 FTIR Analysis 116

4.4 Determination of Optimum RH-WMA Content 117

4.4.1 High Temperature Viscosity Analysis 117

4.4.2 Analysis of G*/Sin δ 122

4.4.3 Analysis of G*Sin δ 124

4.4.4 Analysis of Multiple Stress Creep and Recovery 126

4.5 Storage Stability at Optimum RH-WMA Additive 130

4.6 Physical Properties of Recycled Asphalt Binders Blend Incorporating RH-WMA Additive 131

4.7 Chemical Analysis of Recycled Asphalt Binders Blend Incorporating RH-WMA Additive 132

4.8 Viscosity Analysis at High Temperatures 136

4.9 Recycled Asphalt Binder Stiffness at High Temperatures Based on G*/Sin δ 143

4.10 Modeling the Rheological Master Curves using the 2S2PID Model 145

4.11 Statistical Goodness of Fit 154

4.12 Black Diagram 156

4.13 Frequency Dependency of Storage Modulus and Loss Modulus 157

4.14 Zero Shear Viscosity 161

4.15 Evaluation of Rutting Resistance at Various Temperatures 165

4.16 Summary 172

CHAPTER FIVE: MIX DESIGN AND OPTIMIZATION OF MIXTURES PRODUCTION USING RESPONSE SURFACE METHOD

5.1	Introduction		175
5.2	Evaluation of Reclaimed Asphalt		175
	5.2.1	Reclaimed Asphalt Drying Experiment	175
	5.2.2	Aggregate Gradation and Blending	177
	5.2.3	Bulk Specific Gravity of Recovered Reclaimed Asphalt Aggregate	179
	5.2.4	Binder Content of Reclaimed Asphalt	180
5.3	Optimum Binder Content of Control Mixture		181
5.4	Volumetric Properties of Recycled Asphalt Mixtures with RH-WMA Additive		182
5.5	Strength Properties of Recycled Asphalt Mixtures with RH-WMA Additive		192
5.6	Optimum Binder Content of Recycled Asphalt with RH-WMA Additive		195
5.7	Energy Consumption of RAM-WMA mixture production		197
5.8	Effects of Raw Materials Prices		202
5.9	Effects of Mixing Temperature on Fuel Usage and GHG Emissions		204
5.10	Production Optimization of Recycled Asphalt Mixtures with RH-WMA Additive		205
5.11	Comparison of GHG Emissions at Various Mixing Temperature		211
5.12	Summary		212

CHAPTER SIX: PERFORMANCE OF RECYCLED ASPHALT MIXTURES INCORPORATING RH-WMA ADDITIVE

6.1	Introduction	213
6.2	Analysis of Compaction Energy Index	214
6.3	Indirect Tensile Strength	215
6.4	Resilient Modulus	218
6.5	Dynamic Creep	221

6.6 Correlation between the Dynamic Creep and G*/Sin δ and Non-Recoverable Creep Compliance 228
6.7 Correlation between Reclaimed Asphalt Content and Mixtures Performance 230
6.8 Fatigue Resistance Subjected to Combined Effects of Moisture and Aging 231
6.9 Summary 243

CHAPTER SEVEN: CONCLUSIONS AND RECOMMENDATIONS

7.1 Conclusions 245
7.2 Recommendations for Future Research 246

LIST OF SYMBOLS

E_{α}	Activation Energy
RAP_{bc}	Binder Content of RAP Binder
G_{sb}	Bulk Specific Gravity of Aggregate
G_{mb}	Bulk Specific Gravity of Compacted Specimen
G*	Complex Modulus
η^*	Complex Viscosity
ωc	Cross Over Frequency
$\Delta\theta$	Difference Between the Ambient Temperature and Mixing Temperature
ω	Frequency
Y_j	Fitted Value of The Response
G_g	Glassy Modulus When $\Omega \rightarrow \infty$
ITS	Indirect Tensile Strength
d_j	Individual Desirability Function For Response Number J
η_∞	Infinite Viscosity
G'	Loss Modulus
MQ	Marshall Quotient
m_i	Mass Of Material Type *I*
$max\ f_j$	Maximum Actual (Experimental) Value of Response

$min\ f_j$	Minimum Actual (Experimental) Value of Response
J_{nr}	Non-Recoverable Creep Compliance
n	Number of Responses Included in the Optimization
D	Overall Desirability Function (Geometric Mean of the Individual Desirability Functions)
R	Percent Recovery
$RAP_{binder,mix}$	Percentage of RAP Binder in the Total Binder of a Mixture
RAP_{agg}	Percentage of RAP Aggregate in the Mixture
RAP_{actual}	Percentage of Actual RAP Including RAP Binder Added in the Mixture
δ	Phase Angle
KBr	Potassium Bromide
ε_r	Recovery After One Cycle of Loading
RG	Relative G*Sin δ
A	Regression Parameter
ε_{10}	Shear Strain at the End of One Cycle of Loading
ε_1	Shear Strain at the End of 1 Second of Loading
c_i	Specific Heat Capacity of Material Type I
G_0	Static Modulus When Ω→ 0
G"	Storage Modulus
SIP	Stripping Inflection Point
