UNIVERSITI SAINS MALAYSIA

Second Semester Examination  
Academic Session 2006/2007

April 2007

**ZAT 281/4 - Introduction to Microprocessors**  
***[Pengantar Mikropemproses]***

Duration: 3 hours  
*[Masa : 3 jam]*

---

Please ensure that this examination paper contains **SEVEN** printed pages before you begin the examination.

*[Sila pastikan bahawa kertas peperiksaan ini mengandungi **TUJUH** muka surat yang bercetak sebelum anda memulakan peperiksaan ini.]*

**Instruction:** Answer all **FIVE** questions. Students are allowed to answer all questions in Bahasa Malaysia or in English.

***[Arahan:*** Jawab kesemua **LIMA** soalan. Pelajar dibenarkan menjawab semua soalan sama ada dalam Bahasa Malaysia atau Bahasa Inggeris.]

1. Figure 1 is a 68000 program shown as a series of S-records.

[Rajah 1 merupakan aturcara 68000 yang menunjukkan suatu siri rekod-S.]

- a) What is the starting address of the program?  
[Apakah alamat permulaan aturcara tersebut?] (20/100)
- b) What is the length/size of the program?  
[Berapakah panjang/ saiz aturcara tersebut?] (20/100)
- c) What is the last address of the program?  
[Apakah alamat terakhir aturcara?] (20/100)
- d) Figure 2 shows a single line of a hexadecimal file containing S-record. The checksum appears in the last two characters as "00". It is incorrect. What is the correct checksum?  
[Rajah 2 menunjukkan suatu baris fail perenambelasan yang mengandungi rekod-S. Periksa jumlah yang dipaparkan oleh dua aksara terakhir iaitu "00" adalah salah. Apakah periksa jumlah yang betul?] (40/100)

Figure 2 [Rajah 2]

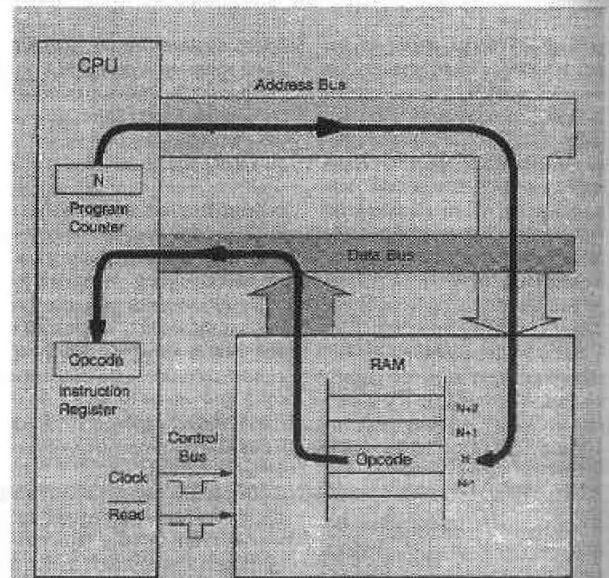

Figure 3 [Rajah 3]

2. Figure 3 shows a block diagram of 68000 microprocessor system showing an opcode fetch operation.  
 [Rajah 3 menunjukkan gambarajah blok sistem mikropemproses 68000 yang menerangkan operasi pengambilan opkod]
- a) If the starting address of the RAM with 1Mbyte capacity is \$00400400, draw the RAM location in the 68000's address space map.  
 [Jika alamat permulaan RAM bersaiz 1 Mbyte ialah \$00400400, lakarkan lokasi RAM dalam peta ruang alamat 68000]  
 (25/100)
- b) In what block is the RAM located if the 68000's address space is divided into 8 blocks of the same size?  
 [Dalam blok apakah RAM tersebut terletak sekiranya ruang alamat 68000 dibahagi kepada 8 blok yang sama saiznya]  
 (25/100)
- c) List the steps-by-step of read cycle timing operation of the opcode fetch in Figure 3.  
 [Senaraikan langkah demi langkah operasi masa kitaran baca untuk pengambilan data dalam Rajah 3.]  
 (25/100)
- d) If a word size of instruction is being fetched from the starting address of the RAM, what is the content of the program counter (PC) after the word has been fetched?  
 [Jika arahan bersaiz perkataan diambil daripada alamat permulaan RAM, Apakah kandungan pembilang program (PC) selepas perkataan tersebut diambil?]  
 (25/100)

Figure 4 [Rakah 4]

Seven-segments display program

(The numbers in bracket [ ] are the execution time)

[Aturcara pemaparan pemapar tujuh-ruas (Nombor dalam kurungan [ ] menunjukkan masa pelaksanaannya)]

3. Figure 4 shows a listing file of a program for driving 4 seven segment display of Abitec microprocessor system in Applied Physics Lab USM.

[Rajah 4 menunjukkan fail listing aturcara untuk memandu 4 pemapar tujuh ruas sistem mikropemproses Abitec di Makmal Fizik Gunaan USM.]

a) What is the size (in byte counts) of the program?  
[Apakah saiz (dalam bilangan byte) aturcara tersebut?]

(20/100)

b) What is the size (in byte counts) of the delay subroutine?  
[Apakah saiz (dalam bilangan byte) subrutin perlengahan?]

(20/100)

c) What are the digits displayed on the seven-segment-displays when the program is executed and explain why those digits are displayed?  
[Apakah digit yang dipaparkan oleh pemapar-tujuh-ruas apabila aturcara dilaksanakan dan terangkan kenapa digit-digit tersebut dipaparkan?]

(20/100)

d) Calculate the delay time generated by the delay subroutine if the speed of the microprocessor is 10MHz.  
[Kirakan masa pelengahan yang dijana oleh subrutin perlengahan sekiranya kelajuan mikropemproses ialah 10MHz.]

(20/100)

e) Explain, what will be displayed on the seven-segment-displays if instruction 25-31 are removed from the program?  
[Terangkan, apakah yang akan dipaparkan oleh pemapar-tujuh-ruas sekiranya arahan 25-31 di buang daripada aturcara tersebut]

(20/100)

4. Based on the program in Figure 4 solve the following problems:

[Berdasarkan aturcara dalam Rajah 4 selesaikan permasalahan berikut:]

a) What is the difference between instruction BRA and BSR used in the program in Figure 4?  
[Apakah perbezaan antara arahan BRA dengan BSR yang digunakan dalam aturcara di Rajah 4?]

(20/100)

b) What is the value in the Stack Pointer (SP) and stack location at the time the microprocessor executes the subroutine delay?  
[Apakah nilai penunjuk stack (SP) dan lokasi stack semasa mikropemproses melaksanakan subrutin perlambatan?]

(20/100)

c) Why is opcode of BSR DELAY \$61000012?  
[Kenapakah opkod BSR DELAY adalah \$61000012?]

(20/100)

- d) What is the value of Program Counter (PC) immediately after the execution of instruction BSR DELAY?

[Apakah nilai pembilang program (PC) sebaik sahaja selepas pelaksanaan arahan BSR DELAY?]

(20/100)

- e) What is the value of Program Counter (PC) immediately after the execution of instruction RTS?

[Apakah nilai pembilang program (PC) sebaik sahaja selepas pelaksanaan arahan RTS?]

(20/100)

Figure 5 [Rajah 5]

5. Figure 5 shows a listing file of test program in accessing the input port or output port of 68000 microprocessor system.

[Rajah 5 menunjukkan fail listing aturcara ujian bagi mencapai port input atau port output sistem mikropemproses 68000]

- a) Identify the test program portion and calculate its size.

[Kenalpasti bahagian aturcara pengujian tersebut dan kirakan saiznya.]

(10/100)

- b) Complete the timing diagram (in appendix) of the program portion.

[Lengkapkan rajah pemas (dalam Lampiran) bahagian aturcara tersebut.]

(30/100)

- c) By using multiple-input NAND gate and NOT gates, decode the switches and led's ports of the microprocessor system.

[Dengan menggunakan get TAKDAN banyak input dan get TAK nyahkodkan port suis dan led system mikropemproses tersebut.]

(30/100)

- d) Modify or rewrite the program in Figure 5 so that we can see the input and output signals displayed on the logic analyzer screen.

[Ubahsuai atau tulis kembali aturcara dalam Rajah 5 supaya kita boleh melihat kedua-dua isyarat input dan output di layar pemapar logik.]
