DECLARATION

I hereby declare that the work produced in this thesis is of my own effort except for quotations and summaries which have been duly acknowledged.

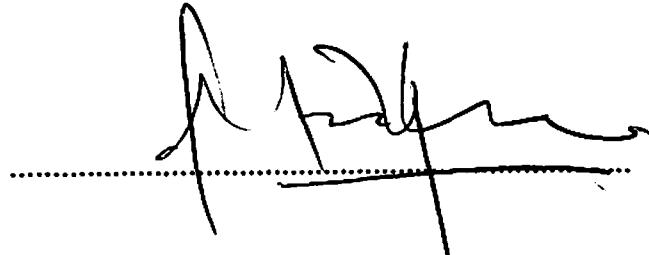

July 29th, 2010

DR IDYAWATI BINTI ABDUL KARIM

PUM 1665 .

CERTIFICATION

This is to certify that to the best of my knowledge, this research project is the original work of the candidate, Dr Idyawati binti Abdul Karim (PUM 1665).

A handwritten signature in black ink, appearing to read "Mohd Razali Salleh". It is written over a horizontal dotted line.

Supervisor:

Professor Mohd Razali Salleh

Senior Lecturer and Consultant Psychiatrist,

Department of Psychiatry,

School of Medical Sciences,

Universiti Sains Malaysia.

ACKNOWLEDGEMENTS

First of all, I would like to express my deepest gratitude to my supervisor, Professor Mohd Razali Salleh, Senior Consultant and Lecturer at Department of Psychiatry, School of Medical Sciences, Hospital Universiti Sains Malaysia for his undying support, comments and guidance from the beginning to the end of preparing my dissertation.

I would also like to extend my appreciation to my co-supervisor, Dr Hj Ahmad Rasidi M. Saring, Head Department of Psychiatry and Mental Health, Hospital Sultanah Bahiyah, Alor Star for his invaluable advice, encouragement and the full support given throughout the completion of my research. I would also like to take this opportunity to thank my fellow colleagues, Dr Zaliha, Dr Tee, Dr Lua, Dr Rostam and Dr Siti who have encouraged me to complete my study until the end and covered my wardworks, clinics and on-calls during my many visits to the Pokok Sena Prison.

A special thanks to Associate Professor Dr Mohd Jamil Yaacob, Head of Psychiatric Department, Lecturer and Child and Adolescence Psychiatrist, Hospital Universiti Sains Malaysia, all my lecturers, members of research committee, staffs and friends for their positive suggestions and recommendations. Without their assistance, my work would not be easily completed. I would also like to extend my thanks to Dr Azriani from the Community Health Department, HUSM, Kubang Krian who had made statistics look easier and simpler.

To all the staffs at Pokok Sena Prison especially from the rehabilitation unit, I would like to dedicate an unlimited gratitude and appreciation for their continuous help and cooperation in finding me suitable research candidates in spite of their busy schedules. A special acknowledgement needs to be forwarded to the Director of Pokok Sena Prison, Tuan Ahmad Fauzi and the head of Rehabilitation Unit, Tuan Jamin for their full cooperation, Tuan Fudzly bin Abdul Wahab as the coordinator and supervisor of the selection of cases in the prison and Puan Nasyitoh and her colleagues for accompanying me throughout the interviews there. Special thanks are not forgotten for all the participants who had agreed to enter this study.

To my examiners, Associate Professor Dr Muhammad Najib bin Mohamad Alwi and Dr Hajjah Rabaiah bt Mohd Salleh for their positive feedbacks and critical recommendations on my thesis. A special gratitude and appreciation for the time spent on reading and carefully commenting on the weaknesses of this paper. Your suggestions and insights on this topic are highly regarded and looked upon seriously.

Further acknowledgement and gratitude to my wonderful parents, Encik Abdul Karim bin Adam and Pn Lisma Abdullah, my beloved siblings especially Azlin and Emelia Abdul Karim and also my in-laws especially my mother in law, Pn Hjh Che Timah Ibrahim who had supported me all the way and had never grumbled in taking care of my active and creative kids when I was away. Last but not least, my greatest thoughts and gratitude goes to my loving husband, Dr Ahmad Fauzey and my four beautiful children, Ameera, Aleeya, Razin and Afeefah for their prayers, patience and understanding of the time much spent in finishing this research.

ABSTRAK

Latar Belakang: Isu kesalahan seksual di Malaysia dikatakan semakin meningkat kebelakangan ini. Pelbagai cadangan telah diketengahkan untuk mengatasi dan mencegah masalah ini dari berleluasa. Namun begitu, sebelum langkah pencegahan dan rawatan yang sewajarnya dapat dilaksanakan, maklumat tentang ciri-ciri dan faktor-faktor yang berkaitan dengan golongan pesalah seksual ini perlu diperolehi.

Objektif: Untuk mengenalpasti peratusan dan perkaitan penyakit psikiatri, penyalahgunaan dadah dan masalah personaliti neurotik di kalangan banduan lelaki yang didakwa dengan kesalahan seksual dan bukan seksual di Penjara Pokok Sena, Kedah.

Metodologi: Kajian hiris lintang ini telah dijalankan di Penjara Pokok Sena, Kedah dari bulan Jun 2010 sehingga Julai 2010. Seramai tujuh puluh (70) pesalah seksual dan tujuh puluh (70) pesalah bukan seksual telah terlibat. Mereka telah ditemuduga menggunakan soal selidik data demografi untuk mendapatkan data sosiodemografi, sejarah berkaitan masalah perubatan dan sejarah jenayah yang lampau. Mereka juga telah diperiksa untuk sebarang masalah berkaitan penyakit psikiatri dan penyalahgunaan dadah menggunakan SCID-I-CV dan soal selidik, MHQ untuk masalah personaliti neurotik. Analisa statistik mengikut program yang berkaitan telah dilakukan dengan menggunakan program SPSS versi 17.0.

Keputusan: Kajian ini mendapati bahawa kebanyakan pesalah seksual adalah terdiri daripada bangsa Melayu dan beragama Islam. Mereka juga didapati berusia dalam purata

pertengahan tiga puluhan, mempunyai latar belakang pendidikan yang rendah dan berpendapatan kurang dari RM 1000 sebulan. Terdapat juga perbezaan yang ketara dari segi sejarah keluarga yang mempunyai penyakit psikiatri dan sejarah keluarga yang terlibat dengan penyalahgunaan dadah. Pesalah seksual juga mempunyai peratusan yang lebih tinggi dari segi sejarah berpisah dengan ibubapa mereka sebelum berusia 16 tahun dan berasal dari keluarga di mana kedua ibubapa bekerja berbanding dengan pesalah bukan seksual.

Sejarah penglibatan dengan kesalahan seksual di masa yang lampau juga didapati lebih tinggi di kalangan pesalah seksual. Secara keseluruhannya, tidak banyak perbezaan dari segi masalah penyakit psikiatri di antara kedua golongan pesalah seksual dan bukan seksual. Terdapat juga perbezaan yang ketara dari kehadiran penyakit psikotik dan emosi di antara pesalah seksual dan bukan seksual. Terdapat juga perbezaan didapati dalam masalah penyalahgunaan dadah di antara kedua kumpulan yang dikaji. Dari segi masalah personaliti neurotik, skala untuk kegelisahan somatik adalah lebih tinggi dalam kumpulan kesalahan seksual.

Kesimpulan: Daripada kajian yang dilakukan, terdapat perbezaan yang ketara pada sebahagian dari ciri sociodemografi, faktor klinikal, sejarah jenayah yang lampau dan penyalahgunaan dadah di antara pesalah seksual dan bukan seksual. Tidak banyak perbezaan dari segi penyakit psikiatri atau masalah personality neurotik di antara kedua kumpulan.

Kata Kunci: Kesalahan seksual, kadar penyakit psikiatri, penyalahgunaan dadah, masalah personality neurotik, SCID-I-CV, MHQ.

ABSTRACT

A COMPARATIVE CROSS-SECTIONAL STUDY ON THE PREVALENCE OF PSYCHIATRIC DISORDER, SUBSTANCE MISUSE AND NEUROTIC PERSONALITY TRAITS BETWEEN MALE SEX OFFENDERS AND NON SEX OFFENDERS IN POKOK SENNA PRISON.

Objectives: To determine the prevalence and association of psychiatry disorder, substance misuse and neurotic personality traits with sexual offending behaviours in male sexual offenders and non sexual offenders in Pokok Sena Prison, Kedah.

Methods: This cross-sectional study was conducted in Pokok Sena Prison, Kedah. Study population consisted of one hundred and forty (140) offenders who had been convicted and was undergoing their sentence in Pokok Sena Prison from June 2010 to July 2010. Seventy (70) participants were selected from the sexual offenders' group and another seventy (70) participants from the non sexual offenders' group. The participants were interviewed using a constructed Clinical Data Form (CDF) for sociodemographic data, clinical and criminal history. They were also assessed for psychiatry morbidity using the Structured Clinical Interview for DSM-IV Axis I Diagnosis: Clinician Version (SCID-I-CV, First et.al, 1997). MHQ was used to screen for neurotic personality traits. Statistical analyses were performed by SPSS version 17.0.

Results: Majority of the population study sample was Malays and Muslims. Mean age for sexual offenders was in the mid thirties, have a lower educational level and earning less than RM 1000 per month. There was a significant difference found in terms of family history of psychiatric illness and family history of substance misuse. Sexual offenders also had a higher proportion of parental separation before the age of 16 years old and history of both parents working compared to the non sexual offenders.

For the related criminal record, past history of sexual crimes was found to be higher in the sexual offenders' group. On the whole, there is no significant difference in psychiatric diagnosis between the two groups. However, there was a significant difference in psychotic and mood disorder when individually diagnosed between sexual and non sexual offenders. There was also a significant difference found in the presence of substance disorder between the two groups. In terms of personality assessment, the subscale for somatic anxiety was significantly higher in the sexual offender group.

Conclusions: There were significant differences found in some of the factors in the sociodemographic data, clinical and criminal history. No significant differences found in psychiatric diagnosis as a whole. However, there was a significant difference in terms of psychotic and mood disorder diagnosed, presence of substance disorder and higher proportionate of somatic anxiety personality in the sexual offender group.

Keywords: Sexual offender, psychiatric disorder, substance misuse, neurotic personality traits, SCID-I-CV, MHQ.
