

THE MORPHOLOGY OF MEHRI QISHN DIALECT IN YEMEN

HASSAN OBEID ABDULLA ALFADLY

**UNIVERSITI SAINS MALAYSIA
2007**

**A STUDY ON THE MORPHOLOGY OF MEHRI OF QISHN DIALECT IN
YEMEN**

by

HASSAN OBEID ABDULLA ALFADLY

**Thesis submitted in fulfilment of the
requirements for the degree
of Ph.D.**

**UNIVERSITI SAINS MALAYSIA
May 2007**

ACKNOWLEDGEMENT

First and foremost, I would like to express my heartfelt gratitude towards Allah for endowing me with power, courage and determination in completing my dissertation. I express special thanks to my supervisors, Dr. Salasiah Che Lah and Dr. Alias Abd. Ghani. They have been helpful guides, severe-critic and great friends. It is the constant encouragement and excitement about field linguistics as an empirical science which unite them and for which I value both of them more than I can express in words. I will always be in gratitude for their patience, continuous encouragement, understanding and advice throughout the preparation of this dissertation.

I would like to express my gratitude and indebtedness to Hadramout University of Sciences and Technology and the Embassy of Yemeni government in Kuala Lumpur for the scholarship granted to me to implement this research and for their constant follow-up during my study in Universiti Sains Malaysia.

I would also like to thank the Chief of the Qishn tribe Saleh Ali Bin Amrooten, to which the informants of the current study belong, for granting me permission not only to formally conduct this study, but also to move freely among the Mehri Qishn (henceforth, MQ) community members as one of them, Sheikh Yaser Al-Dobai and physician Saeed Al-Yafei for their support,

cooperation and introducing me in the first visit to two Mehri natives who were helpful in getting me acquainted with their community fellows. Warm-felt gratitude and special thanks go to those MQ informants and other Mehri natives who befriended the researcher and made it easy for him to be ushered into their houses, family gatherings, and private social gatherings, and helped me to learn their language and nurtured the awe I felt for their language discovery; particularly the informants Saeed Bin Zoamah, Saad Bin Zoamah, uncle Mohammed Bin Shaarar, Abdulla Bin Shaarar, Abdul Aziz Bin Shaarar, Mohammed Bin Abdat, Mohammed Bin Shallal, the poet Salem Amheer, Rwaih Sukban, Abu Sulleiman, and Al-Brek bin Amrooten. I would also like to thank many friends who offered me assistance during the course of many field work trips. I am particularly grateful to Abdulla Bin Sdeif, Saeed Al-Yafei and Saeed Bin Zoma, who provided lodging and assistance in any way they could in the Qishn area.

Thanks on a personal level are due to Prof. Dr. Gideon Goldenberg for his comments and suggestions which were greatly helpful in the development and exposition of the original morphological data related to Modern South Arabian languages Semitic linguistic knowledge. His emphasis on the largest issues of linguistic theory, Root and Pattern Morphology, has, I hope, allowed me to see some of the most startling connections and implications of MQ morphological system. Any shortcomings or mistakes are mine.

Finally, I record my deepest appreciation to my beloved wife and my loving children Faris, Mosab, Samaha, Fatema and Mohammed without whose patience, devotion and sacrifice during MA and Ph.D. years of research in Universiti Sains Malaysia, it might not have been possible for me to complete this work.

CHAPTER 1: INTRODUCTION

1.1	Introduction	1
1.2	The Historical Background of Modern South Arabian Languages	1
1.3	Afro-Asiatic Languages	8
	1.3.1 An Overview of MSA	11
	1.3.1.1 Jibali	16
	1.3.1.2 Soqotri	17
	1.3.1.3 Bathari	17
	1.3.1.4 Harsusi	18
	1.3.1.5 Hobyot	18
	1.3.1.6 Mehri	19
1.4	The Writing System of MSA	20
1.5	The Statement of the Problem	21
1.6	The Purpose of the Study	28
	1.6.1 Research Questions	28

1.7	The Significance of the Study	29
1.8	The Limitations of the Study	31
1.9	Definition of Terms	32
1.10	Summary	35

CHAPTER 2: LITERATURE REVIEW

2.1	Introduction	36
2.2	Morphology and its Basic Concepts	36
2.3	Morphological Operations	41
2.4	Overview of Approaches to Morphological Descriptions	43
	2.4.1 Traditional Approaches	43
	2.4.2 The Autosegmental Phonology Theory	48
	2.4.3 Theory of Nonconcatenative Templatic Morphology	51
2.5	Fieldwork Synchronic Descriptive Models	62
2.6	Previous Linguistic Studies on MSA Languages	66
	2.6.1 MSA Languages	66
	2.6.2 Previous Linguistic Studies on MQ	70
2.7	The Conceptual Framework of the Study	75
2.8	Summary	77

CHAPTER 3: METHODOLOGY & RESEARCH DESIGN

3.1	Introduction	78
3.2	Research Design	79
3.3	Samples and Sample Selection	83
3.4	Data Sources	90
3.5	Instrumentation and Data Gathering Procedures	94
3.6	Method of Analysis	103

CHAPTER 4: PHONOLOGICAL DATA: MQ PHONOLOGY

4.1	Introduction	105
4.2	Phonology	105
4.2.1	Inventory of Distinctive Phonemes	106
4.2.1.1	Consonants	107
4.2.1.1.1	Description of Consonant Phonemes	111
4.2.1.1.2	Plosives or Stops	113
4.2.1.1.3	Nasals	114
4.2.1.1.4	Fricatives	115
4.2.1.1.5	Approximants	120
4.2.1.1.6	Ejectives	122
4.2.1.2	Vowels	125
4.2.1.2.1	Vowel Length	126
4.3	Phonological Alternations	127
4.3.1	Indiscriminate Alternations of /u:/ and /ɔ:/	128
4.3.2	Environmentally Conditioned Nasalization of Vowels	128
4.4	Phonotactics	129
4.4.1	Syllable Structure and Types	129
4.4.1.1	Syllable Structure	129
4.4.1.2	Syllable Types	131
4.4.2	Word Structure	133
4.4.2.1	MQ Consonant Clusters	133
4.4.2.2	Monosyllabic Words	148
4.4.2.3	Disyllabic Words	148
4.4.2.4	Tri-Syllabic Words	148
4.4.2.5	Quadri-Syllabic Words	149
4.4.3	Distribution of Phonemes	151
4.4.3.1	Final Syllables	153
4.4.3.2	Pre-Final Syllables	154
4.4.3.2.1	The Penultimate Syllable in Disyllabic	

	Words	154
	4.4.3.2.2 Pre-Final Syllables in Tri-Syllabic Words	155
	4.4.3.2.3 Pre-Final Syllables in Quadri-Syllabic	
	Words	156
4.5	Prosodic Features	157
4.6	Summary	164

CHAPTER 5: MORPHOLOGICAL DATA: WORD FORMATION IN MQ

5.1	Introduction	166
5.2	Word Formation	168
	5.2.1 Morphological Units	170
	5.2.1.1 Roots	171
	5.2.1.1.1 The phonemic Shape of Roots	172
	5.2.1.2 Stems	174
	5.2.1.3 Bases	175
	5.2.1.4 Lexemes	176
	5.2.1.5 Affixes (Affixational Morphemes)	177
	5.2.1.5.1 Inflectional Affixes	177
	5.2.1.5.2 Derivational Affixes	192
5.3	Affixation	194
	5.3.1 Non-Concatenative Affixation	194
	5.3.2 Concatenative Affixation	196
5.4	Clitics and Cliticization	197
	5.4.1 Proclitics	199
	5.4.2 Enclitics	203
5.5	Root and Pattern Morphology of Mehri Qishn	206
5.6	Segmental Processes in MQ	209
	5.6.1 Stem Modification	209
	5.6.1.1 Substitution of Segments	210
	5.6.1.1.1 Apophony	210

5.6.1.1.2	Suppletion	211
5.6.1.1.3	Reduplication	212
5.6.1.1.4	Subtractive Morphology	216
5.6.1.1.5	Consonant-Vowel Compensatory Metathesis in MQ	217
5.6.1.1.6	Replacive Morphology	218
5.7	Summary	218

CHAPTER 6: MORPHOLOGICAL DATA: NOMINAL WORD CLASSES

6.1	Introduction	220
6.2	Nouns	220
6.2.1	The Phonemic Shape of Singular Noun Morphemes	225
6.2.2	The Plural Nouns in MQ	228
6.2.3	The Phonemic Shape of Internal Plural Nouns	230
6.3	Verb-to-Noun Derivation	235
6.3.1	Nominalising /eɪn/	235
6.4	Adjective-to-Noun Derivation	236
6.4.1	Nominalising /eɪn/	236
6.5	Diminutive Nouns in MQ	238
6.6	Pronouns	239
6.6.1	Subject Personal Pronouns	240
6.6.1.1	Independent Subject Pronouns	241
6.6.1.2	Pronominal Subject Suffixes	243
6.6.1.3	Pronominal Subject Prefixes	246
6.6.2	Object Pronouns	248
6.6.2.1	Object Pronominal Suffixes	249
6.6.3	Demonstrative Pronouns	254
6.6.4	Possessive Pronouns	257
6.6.4.1	Nominal Possession	260

6.7	Numerals and Quantifiers	261
6.7.1	Numerals	261
6.7.1.1	Ordinal Numbers	264
6.7.2	Quantifiers	265
6.8	Interrogatives	265
6.8.1	Person-Questioning /mɔ:n/	266
6.8.2	Time Questioning /mi:tən/ , /heɪtən mɪn wæk'ət/	266
6.8.3	Item / Situation-Questioning /hɛh/, /heɪtən/	266
6.8.4	Reason-Questioning /dəkɔ:h/	267
6.8.5	Manner-Questioning /hɪbɒh/	267
6.8.6	Location-Questioning /hɔ:n/	268
6.8.7	Number-Questioning /kɛm/	268
6.9	Co-Ordinating Morphemes	269
6.9.1	Masculine Relative Marker /deɪd/	269
6.9.2	The Feminine Relative Marker /di:d/	270
6.10	Nominal Particles	271
6.10.1	The Connective Particle /wə/ /w-/	272
6.10.2	The Adverbial Particle /w/	273
6.10.2	The Conditional Particle /wən, ?ən/, /lk'ə?/, /hæm/	273
6.10.3	The Particle /də/, /dɪ/	274
6.10.4	The Particle /bɛ/ /b-/	275
6.10.5	The Particle /ʃ-/	277
6.10.6	The Particle /hɛ/ /h-/	279
6.10.7	The Particle /?ə/	281
6.10.8	The Particle /t-/	281
6.10.9	The Particle /kɛ/	281
6.10.10	The Particle /l-/	282

6.10.11	The Particle /bəʔeɪ/ ‘without’	283
6.10.12	The Particle /ʔæɪ/ ‘round’	283
6.10.13	The Particle /ʔʌɪ/	284
6.10.14	The Negative Particle /læ/	284
6.10.15	The Adversative Particle /li:kən/ ‘but’	285
6.10.16	The Particle /mɪn/	285
6.10.17	The Particle /bɛɪ, bəɪ/	287
6.10.18	Particles of Nominal Origin	288
6.10.18.1	The Word /bæʔəd/ ‘after’	289
6.10.18.2	The Word /bəsɛbbɪ:t/	289
6.10.18.3	The Word /t’əɪ/	289
6.10.18.4	The Word /nχæɪ/	290
6.10.18.5	The Word /fənu:n/ /fɔ:n/	291
6.10.18.6	The Word /sɪɪ/	292
6.10.19	The Particle /ʔæd/	293
6.10.20	The Particle /lu:ð/ ‘towards’	294
6.10.21	Equation /ʔəs/	295
6.11	Adjectives	296
6.11.1	The Phonemic Shapes of Singular Adjective Morphemes	297
6.11.2	The Feminine Singular Adjectives	299
6.11.3	The Plural Adjectives	299
6.11.4	The Phonemic Shapes of Internal Plural Adjectives	301
6.12	Summary	302

CHAPTER 7: MORPHOLOGICAL DATA: VERBAL WORD CLASSES

7.1	Introduction	304
7.2	Verbs	306
	7.2.1 The Verbal Stem Morphology	309
	7.2.1.1 The Root	309
	7.2.1.1.1 Bi-Consonantal Roots C1C2	311
	7.2.1.1.2 Tri-Consonantal Roots C1C2C3	315
	7.2.1.1.3 Quadri-Consonantal Roots C1C2C3C4	317
	7.2.1.2 The Vocalic Pattern Morpheme	318
	7.2.1.3 The Verb Stem Templates	320
	7.2.1.3.1 Verbal Word Pattern I	322
	7.2.1.3.2. Verbal Word Pattern II	322
	7.2.1.3.3 Verbal Word Pattern III	325
	7.2.1.4 The Derived Word Patterns	327
	7.2.1.4.1 The Derived Word Pattern I	
	də(ɪ)C1u(ɔ):C2əC3	328
	7.2.1.4.2 The Derived Word Pattern II	
	də(ɪ)C1C2i(u, ɔ):C3	329
	7.2.1.4.3 The Derived Word Pattern III C1ɛtC2əC3	330
	7.2.1.4.4 The Derived Word Pattern V	
	(hə-)C1C2ɔ:C3	331
	7.2.1.4.5 The Derived Word Pattern VI	
	ʃəC1C2ɔ(u):C3	332
	7.2. 2 Verbal Paradigms: The Perfective, Imperfective and Future Forms	333
	7.2. 3 The Active and Passive Voice in MQ	345
	7.2. 4 The Future Verb	349
	7.2. 5 The Reflexives	358
	7.2. 6 The Reciprocal Verbs	360

7.2. 7	The Comparative Verb Formation in MQ	362
7.2. 8	Noun-to-Verb Derivation	365
7.2. 9	Adjective-to-Verb Derivation	367
7.2.10	Temporal Verbs	368
7.3	Auxiliaries and Adverbs	369
7.3.1	Modal Auxiliaries	369
7.3.2	Negation Marker	369
7.3.3	Emphasis	371
7.3.4	Adverbs	372
7.4	Summary	373

CHAPTER 8: SUMMARY, CONCLUSION, AND IMPLICATIONS FOR FUTURE RESEARCH

8.1	Introduction	376
8.2	Summary	376
8.3	Conclusion	381
8.4	An Account of the Current Dissertation Contributions	386
8.5	Pedagogical Implications	387
8.6	Implications for Future Research	389

Morfologi Dialek Mehri Qishn di Yemen

ABSTRAK

Kajian ini menerangkan tentang morfologi Mehri Qishn (disingkat sebagai MQ) di Yemen. MQ merupakan salah satu daripada enam Bahasa Moden Arab Selatan yang tidak mempunyai tulisan khusus, yang mempunyai pertalian dengan rumpun Semitik barat cawangan selatan. Ia dianggap sebagai bahasa yang diancam kepupusan. Secara khususnya, kajian yang bersifat deskriptif ini bertujuan: (1) untuk mengenalpasti unsur-unsur morfologi (morfem-morfem, bentuk-bentuk linguistik dan lain-lain) dalam dialek MQ, (2) untuk menerangkan bentuk-bentuk fonem pada morfem-morfem dialek MQ, (3) untuk menerangkan bagaimana morfem-morfem dialek MQ terbentuk dan dibahagi-bahagikan di dalam lingkungannya. Kajian ini mengadaptasikan kaedah etnografik yang berbentuk kualitatif. Ia melibatkan lebih kurang sepuluh orang pemberi maklumat (informan) daripada sejumlah 35 orang yang terdiri daripada pelbagai peringkat umur, yang dipilih berdasarkan persampelan secara pertimbangan (pengadil). Data-data dalam morfologi MQ telah diperolehi dengan menggunakan kaedah berikut: Senarai Swadesh, temubual informal, pemerhatian peserta (participant observation) suatu soalselidik morfologi lisan yang direka dan diadaptasi daripada soalselidik Dahl's (1985) dan Bouquiaux dan Thomas (1992) khusus untuk tujuan ini. Beberapa model dan teori juga telah diadaptasikan sebagai dasar kepada kaedah penyelidikan dan juga untuk menerangkan data morfologi dalam kajian ini. Ini termasuklah

Teori Perangkaian dalam Morfologi Semitik (morfologi akar kata dan corak), Model Percubaan Deskriptif Sinkronik dan pendekatan eklektik IP+WP. Maklumat yang diperolehi daripada data morfologi dalam kajian ini mendedahkan bahawa MQ suatu bahasa yang berdasarkan sistem akar kata tri-konsonan dalam lingkungan morfologi akar kata dan corak. Akar kata itu sendiri tidak mempunyai sebarang makna yang mutlak, tetapi lebih merupakan sebagai satu set akar kata yang mengandungi tiga konsonan yang bermungkinan membawa lingkungan makna yang tertentu (Kramer, 2005). Akar kata tersebut hendaklah dimasukkan ke dalam corak terbitan, yang terdiri daripada huruf-huruf vokal di antara setiap konsonan dan kadangkala mengandungi juga penambahan imbuhan, bagi membolehkan maknanya menjadi nyata. Sebagai tambahan, MQ mempunyai peranti pembentukan kata kedua seperti struktur kata dasar dan akhiran, yang menghubungkan kata akhiran pada suatu teras, yang pada kebiasaannya merupakan suatu perkataan, seperti yang terdapat dalam bahasa Inggeris. Dapatan kajian menunjukkan bahawa MQ adalah satu bahasa Semitik yang mempunyai ciri-ciri sintetik yang tinggi, yang kaya dengan unsur-unsur morfologi. Sistem kata kerja dan frasa namanya adalah sangat mudah berubah-ubah, dengan kata awalan dan kata akhiran sebagai penunjuk kategori bagi kelas-kelas seperti orang, nombor, gender dan kala kata kerja. Morfologi terbitannya juga kaya dan mempunyai pelbagai kata terbitan tambahan yang terdiri daripada berbagai jenis struktur di samping mempunyai kata akar, kata dasar dan alomorf imbuhan yang sangat kompleks. Akhir sekali, implikasi pedagogi dan

penyelidikan selanjutnya dicadangkan untuk mendapatkan pemahaman yang lebih menyeluruh terhadap sistem linguistik dan kedudukan MQ itu sendiri di samping mendapatkan garis panduan ke arah pemeliharaan MQ.

The Morphology of Mehri Qishn Dialect in Yemen

ABSTRACT

This study describes the morphology of Mehri Qishn (henceforth, MQ) in Yemen. MQ is one of the six Modern South Arabian unwritten languages, related to the southern branch of the western Semitic family. It is considered as an endangered language. Specifically, this descriptive study aimed: (1) to identify the morphological items (morphemes, morphs, etc.) of Mehri Qishn dialect, (2) to describe the phonemic shapes of Mehri Qishn dialect morphemes, (3) to describe how Mehri Qishn dialect morphemes are internally formed and distributed. The study adopted the ethnographic qualitative design. It involved 10 key informants out of 35 of different ages selected by judgment sampling. The data on MQ morphology were elicited by following Swadesh list, informal interview, participant observation, and oral morphology questionnaire which were designed and adapted from Dahl's, (1985) and Bouquiaux and Thomas questionnaires (1992). A number of models and a theory were adopted as the basis for research design and for describing the morphological data of the study. They include Nonconcatenative Theory of Semitic Morphology (Root and Pattern Morphology), Synchronic Descriptive Experimental Model, and Item and Process (henceforth, IP) and Word and Paradigm (henceforth, WP) Eclectic Approach. The elicited morphological data of the study revealed that MQ is based on a tri-consonantal root system within Root and Pattern Morphology. Roots themselves have no definite meaning, but

rather a root set of three consonants carries a range of potential meanings (Kramer, 2005). A root must be placed into a derivational pattern, which consists of vowels between each consonant and sometimes the addition of affixes, in order for the meaning to be realized. Additionally, MQ has a second word-formation device i.e. the stem-and-suffix structure, which attaches a suffix to a base, usually a word, as in English. The findings showed that MQ is a highly synthetic Semitic language with a rich morphology. The verbal and nominal systems are highly inflectional, with prefixes and suffixes indicating categories such as person, number, gender and tense for verbs. Derivational morphology is also rich and varied with a large array of derivational affixes of various structures and with an extremely complex root, stem and affix allomorphy. Finally, pedagogical implications and further research are suggested to reach a more comprehensive understanding of the linguistic system and situation of MQ and a guideline towards MQ preservation.

CHAPTER 1

INTRODUCTION

1.1 Introduction

This chapter describes the general background to the study, which includes the historical background of Modern South Arabian languages. It introduces the discovery of Modern South Arabian languages, its genetic family and its classification within the Afro-Asiatic superfamily, Mehri language and its speakers. The chapter includes the statement of the problem under study, the significance of the study, the limitations of the study and the purpose of study including research questions and objectives.

1.2 The Historical Background of Modern South Arabian Languages

The discovery of a number of languages in various regions of the Arabian Peninsula has put an end to the controversy over the diversity of these languages. Many inscriptions have been found in the northern and north-western parts of the Peninsula testifying to the former existence, in these parts, of languages including Safatic, Lihyanic, Thamudic, and Nabataen (Al-Mashani, 1999; Bakalla, 1981). In the southern parts, inscriptions of a wide variety have been identified by linguists as Minaic, Sabaic, Hadramitic, and Qatabanic. While all these languages are now extinct, they can still be traced not only in the inscriptions but certain features of them also in colloquial Yemeni Arabic and in all probability the Modern South Arabian (henceforth, MSA) languages (Ibid, Hujailan, 2003). Versteegh (1997)

expressed the probability that Mehri goes back to a spoken variety of these languages.

The South Arabian languages may have remained the spoken languages, yet they could not last long against the overwhelming influence of classical Arabic and its dialects (Hujailan, 2003). The latter swept away and replaced the southern language in the whole of Yemen and the South of the Arabian Peninsula, except the MSA languages (Al-Mashani, 1999). To be exact, what remains of the Sayhadic languages of South Arabia is to be found in the contemporary Yemeni dialects, which are mostly derivatives of classical Arabic in regard to general structure.

Over the last two centuries, Western linguists and scholars have exerted much effort in deciphering and studying these languages as a facet of their more general interest in the study of Semitic languages. The Arab linguists, on the other hand, while recognizing the existence of these languages and dialects, unfortunately have not studied them in the way that Western linguists have. For instance, the famous Arab linguist Abu 'Amr b. al-'Ala (1989) stated, as cited in Al-Mashani (1999), Al-dhofari (1999) and Al-Mekhlafi (2001), that the tongue of Himyar, as well as that of the furthest parts of Yemen (aqasi al-Yemen) and their Arabic, do not belong to the Arabic of the North. Himyar (or Himyaritic) refers to the languages of those Arabs who are mentioned in the old South Arabian sources and who settled in this region, South Arabia (Versteeg, 1997). Al-Hamadani (1983) shared the same view with Abu 'Amr (1989), although he is a Yemeni historian and

linguist. Al-Mashani (1999) commented that in spite of the fact that the Arabs are considered as one group, they have different tongues and there is a variance among them in pronunciation and utterance. Further, Ibn Jinni (1952) wrote that it was undoubtable that the language of Himyar is completely different from that of Ibnay Nizar, which refers to the North Arabic (Ibid). Finally, in referring to Himyar, Ibn Manzur (1990) stated that they have languages and expressions which deviate from the dialects of other Arabs. Katzner (2002) referred to the southern coast of the Arabian Peninsula where the people speak a number of dialects known collectively as South Arabic. Katzner (2002) affirmed that these dialects differ so greatly from the Arabic of the north that South Arabic is often considered a separate language. By South Arabic Katzner (2002) unquestionably meant the MSA languages. Because there is no intercomprehension between the speakers of these languages and the speakers of north Arabic they are therefore considered as distinct and separate languages.

There is a great scarcity of information about the ancient languages of South Arabia (Al-Mashani, 1999). The unavailability of this information would not help in giving a clear scope of the historical study of the ancient Arabian languages. As long as the present study is only concerned with the morphology of Mehri language in its present status, this scarcity would not have much effect on it. Indeed, it is not necessary to know the history of a language in order to be able to describe it as a synchronic investigation does not necessarily presuppose diachronic investigation (Langacker, 1972; Al-Saaran, 1998). Kastovsky (2005)

assumed that only after a synchronic description has been provided one can look at the history of the patterns characterising a synchronic system.

There are several factors that helped to preserve the Mehris in the most southern part of South Arabia. One of these factors is that Al-Mahrah region lay too far away from the centers of classical Arabic and its dialects (Hujailan, 2003). A very long distance stretches between Al-Mahrah and the nearest such centers, Hadrami cities and Hejaz, a distance covered by extensive deserts, very high mountains, plains, and very deep valleys.

The staple foods of the Mehri people are meat, fish in coastal areas, millet, and seasonal crops (Hofstede, 1998). This has also been a major factor in keeping the tribes isolated from outside events and influences of change. Since there have been no pressing circumstances compelling them to mix with outsiders, their language has not been subject to changes. Even should tribesmen go to make purchases outside their territories, their dialogue will be very limited. It will not go beyond questions about provisions and the answers to those questions. According to Crystal (2000), in most settings, clusters of factors interact in preserving the languages of minority communities. Crystal (2000) drew on the conclusion of a researcher's report on the Ugonk of Thailand that a language survives in geographical areas which are relatively isolated; the communities there are more likely to be economically self-sufficient and to have little contact with outside groups.

The tribes in this region have a high degree of self-respect and feeling of personal nobility, and so they greatly value their adherence to their own languages. The value that they attach to their history and culture is related to their feeling of purity and distinction from others (Ibid). Had it not been for the natives' tenacious adherence to their language, it would not have lasted and survived against classical Arabic and its dialects and other influences for change.

It can be said that there was never sufficient opportunity for classical Arabic and its dialects to constitute a real threat to the Mehris, comparable to the way in which classical Arabic obliterated the Sayhadic languages and dialects in different regions of Yemen. Although scholars admit the existence of a south Arabian language different from that of Modar, they seem to have done nothing to study it even from an exploratory point of view as contemporary scholars and researchers do. According to Al-Mashani (1999), our original knowledge of the Sayhadic languages is derived from Islamic sources and it remained sparse for many centuries because it was based on what was copied from early Arab scholars. The information obtained from the sources amounts to no more than brief descriptions and prefabricated, premature judgments, which are not founded on comparative studies or sufficient data.

While there is only very limited information about the Mehris in Arabic sources, nevertheless there is sufficient information to conclude that they are contemporary south Arabian languages used throughout a very remote area at the end of the southern Arabian Peninsula. As pointed out by Al-Mashani (1999) this is

unsurprising if we consider the scant regard paid by these Arabic sources to those Sayhadic languages and dialects which are more famous than Mehri. Most of the material in these Arabic sources about the Mehri is confined to noting the difficulty it presents to outsiders and to remarking on its oddness and certain selected characteristics. All these remarks are evidently based on insufficient knowledge.

No doubt, MSA languages of today are not identical with the ancient ones as it is not possible for a language to remain unaltered over such a long course of time. The language of any society is subject to the changes that necessarily occur. No society will remain immune from these changes (Crystal, 2000). Modern Mehri, for instance, is not the same as that which existed during the ages of Himyar (Ali, 1989). This region, South Arabia, has undergone many social and economic forces, together with many different political events, since the emergence of Islam. These events and forces must have had considerable effects on the language and social structure in this Mehri region (Ibid).

In referring to the linguistic situation in the Arabian Peninsula, Versteegh (1997) described the south Arabian languages as the only foreign languages in the region, which were no longer used in its epigraphic form but some varieties, known as the Modern South Arabian languages, must have remained in use as colloquial languages spoken today by some tens of thousands of speakers in the provinces of Mahra (Yemen) and Dhofar (Oman), and on the Island of Soqatra. Nurse and Philippson (2003) went astray in the identification of the language spoken in the Island of Soqatra. They described it as “a longstanding Swahili-speaking

community on the island of Soqotra, off the Somali coast but technically part of the Republic of South Yemen.” (Ibid, p. 1). Nurse and Philippson (2003) stumbled on geographic confusion when they named a Semitic language i.e. Soqotri, as a Swahili although the natives of the island are Arab Yemenis speaking a MSA language belonging to the Afro-Asiatic languages. This contradiction reflects the negligence, by linguistic scholars, into which MSA languages have been put.

There are conflicting opinions regarding the terminological meaning of the word ‘Mahrah’. Is it a name of a man, of a geographic region, or of a group of tribes (Ali, 1989)? Many writers in search for its origin direct their effort into genealogy and kinship believing that the name must have been derived from a name of a family, or the forefather of the particular community, etc (Al-Aidaros, 1996). The Mehri region today refers to a certain geographic location, and also to a group of tribes. According to Ali (1989) and Hujailan (2003), the Mehri people claim that they are descended from a historic personality (Mahrah Bin Amr Bin Hidan) whose name, due to his powerful and influential authority and high esteem, has been used to denote a number of tribes dwelling in the southern and eastern-southern coasts of the Arabian Peninsula. The land, which is inhabited by these tribes, is called Al-Mahrah. The name ‘Mahrah’ is restricted today to the district of Mahrah, one of the 20 districts of the Republic of Yemen.

Al-Aidaros (1996) argued that this attribute or relation happens to exist sometimes, but not everywhere and in every field, and if it happens, it may not be

the only factor. Al-Aidaros (1996) had the opinion that it was not necessary to relate it to a particular name of a person.

The Mahrah tribes occupy an extent of country exceeding that of any other tribe in the southeastern part of Arabia. According to Carter (1847, p. 339), the limits of their coast are generally allowed to be the opening of the great Wadi Masilah "... on the S.W, in 51 13' E. long, and the town of Damkot, in the Bay of Al Kamer, "on the N.E, in 52 47', E. long", giving them a coast-line of about 135 miles..."

Like the other great tribes, they have their divisions, their subdivisions, and their families or baits. Regarding their characteristic features, Carter (1847, p.340) described them that "they are by no means a handsome race, for their features are for the most part short and irregular, their eyes small, sunken, black, and piercing, with a cunning and very frequently a sinister expression of countenance." When two Mehri meet each other, as a salutation they touch each others' fingers and bring their noses in contact with each other, side by side, and at the same time gently, though audibly, inhale the air through their nostrils (Ibid).

1.3 Afro-Asiatic languages

Mehri is an unwritten Semitic language of the South-Semitic subgroup. It belongs to the Afro-Asiatic family of languages, which have about 350 million speakers (Comrie, 2001; Katzner, 2002; Downing, 2004), as illustrated in Figure.1.1 below, – about three fourths of whom are in Africa, the rest in the

Middle East (Bender et al, 1976; Katzner, 2002) – which has several major branches: Semitic (including languages such as Arabic); Berber; Chadic (including languages such as Hausa); Cushitic (including languages such as Somali); Ancient Egyptian, whose modern descendants, Coptic, is preserved as a liturgical language; and Omotic (of which the most important is Wolaytta) (Rowan, 2006). South Semitic – which includes MSA languages and several extinct languages – are related in some aspects to Ethiopian languages (Ibid), as illustrated in the Figures 1.1 and 1.2 below:

Figure.1.1: Map Showing the Distribution of Afro-Asiatic Languages
Source: <http://www.answers.com/afroasiatic>

In addition to Arabic and Hebrew, the Semitic languages include the Ethiopic language: Amharic, Tigrinya, Tigre, Gurage, and Harare. Modern South Arabian languages include Mehri, Jibbali, Jaddat Alharasis, Soqotri, Batharic, and Hobyot spoken in Yemen, Oman, and Saudi Arabia as illustrated in Figure 1.2 below. Arabic dwarfs all the others in number of speakers (about 230 million) and is the official language of more than 15 countries (Katzner, 2002). The Berber languages are spoken in North Africa. There are about 12 million speakers in all: 7 million in Morocco, 3 million in Algeria, one million in Niger, 750,000 in Mali, and much smaller numbers in other countries (Ibid). The Cushitic languages are spoken mainly in Ethiopia and Somalia. According to Katzner (2002), they also extend into Eritrea, Sudan, and Kenya. In Ethiopia they are spoken by about half the population, while in Somalia the Somali language is spoken everywhere. Oromo, Sidamo, and Hadiyya as well as Somali belong too to the Cushitic languages in Ethiopia (Rowan, 2006), in addition to Beja spoken in southern Sudan and Afar spoken in Ethiopia and Eritrea. Oromo and Somali have a number of speakers in Kenya. At present Somali and Oromo are the only Cushitic languages with a formal system of writing (Katzner, 2002).

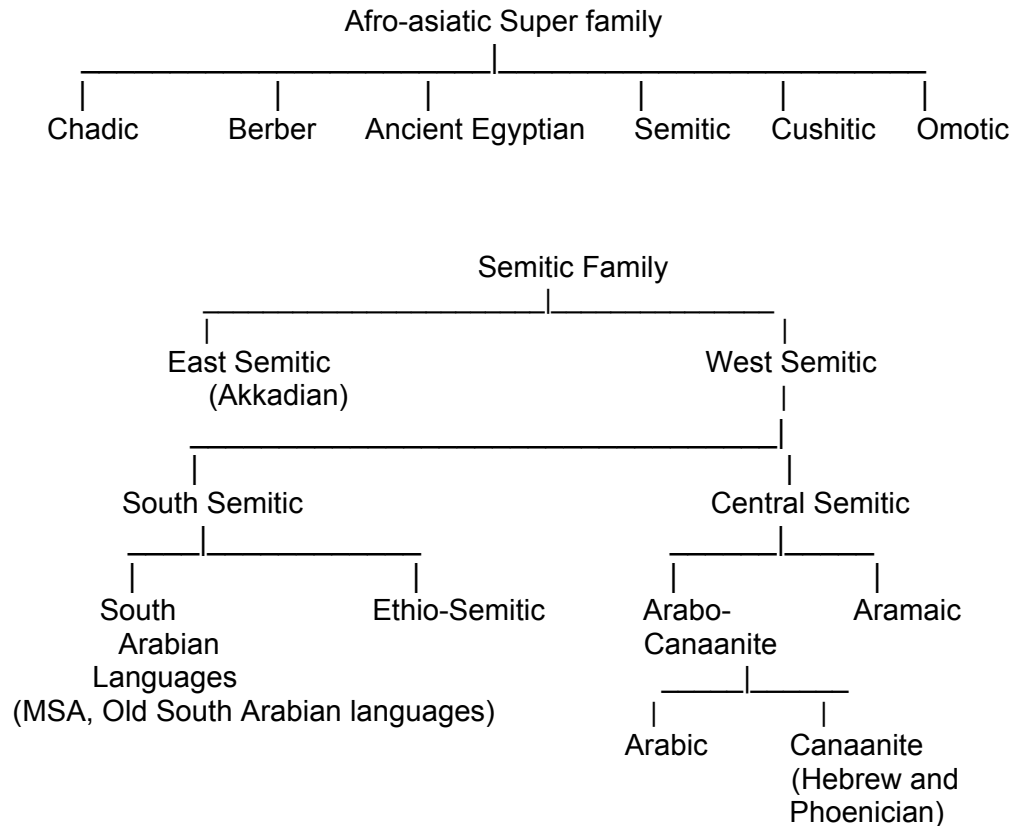

Figure. 1.2: A Family-Tree Diagram of Language Families, Hetzron and Bender (1976)

It can be noted from the above diagram that MSA languages are grouped together with the Semitic languages of Ethiopia and the Sayhadic languages (also called Epigraphic South Arabian or Old South Arabic) in the South Semitic branch. This subgrouping, as pointed out by Hetzron and Bender (1976), is justified by the shared feature of the presence of a vowel following the first consonant in the verb-form known as the imperfect.

1.3.1 An Overview of MSA Languages

The MSA languages are spoken in the south of Oman (Dhofar) and the southeast of Yemen (Al-Mahrah) (Appleyard, 2002). The name is slightly

misleading as they are not dialects of Arabic (Simeone-Senelle, 1997). The languages are grouped together with the Semitic languages of Ethiopia and the Sayhadic languages (also called Epigraphic South Arabian or Old South Arabian languages) in the South Semitic branch as shown previously. Mehri, Soqotri, Jibbali, Bathari, Harsusi and Hobyot belong to the MSA languages (Leslau, 1946, 1970; Stroomer, 1996) as shown in Figure 1.3 below. About 140,000 to 200,000 speakers speak these languages (Ali, 1989; Simeone-Senelle, 1997). Three of MSA are spoken in the Republic of Yemen: in the south and eastern part, in the province of Mahrah (Mehri and Hobyot) and in the island of Soqatra and the adjacent Abd-Al-Kuri small islands and Samha (Soqotri) (Simeone-Senelle, 1998, 2003). Four are spoken in the Sultanate of Oman, in the west in Dhofar (Mehri, Hobyot, Bathari, and Jibbali) and in Jiddat Al-Harasis (Harsusi) (Ibid).

The extent to which research has been carried out on the languages varies from language to language. Around 1900 many stories and some poems in Mehri (Southern dialect group), Jibbali and Soqotri were collected and published (Jahn 1902, Müller 1902, 1905, 1907, as cited in Hofstede (1998) and Amshoosh (2001). Until recently, extensive research has been carried out on Soqotri (Naumkin, 1998; Johnstone, 1968; Fox, 1975) and Mehri (Simeone-Senelle, 1997; Al-Aidaros; 1996, 1999, 2001; Sima, 2002) and to a lesser extent on Jibbali (Matthews, 1969; Johnstone, 1980; Hofstede, 1998) and Harsusi (Johnstone, 1970).

Figure.1.3: The Geographic Locations of MSA (Simeone-Senelle, 1997)

Despite what the name might suggest, the MSA languages are different enough from Arabic to make intercomprehension impossible between speakers of any of the MSA and Arabic speakers (Simeone-Senelle, 1997, Amshoosh, 2001). Moreover, intercomprehension between the speakers of MSA is not possible. A speaker of Soqotri cannot understand a Mehri or Jibbali speaker except by an interpreter. The word 'Mehris' is sometimes metaphorically and commonly used to refer to the MSA (Al-Aidaros, 2001). They are considered to be endangered languages due to the predominance and influence of Yemeni and Omani Arabic in all aspects of the life of the Mehri population (Hofstede, 1998; Al-Mashani, 1999; Amshoosh, 2001); the fact that was affirmed by Crystal (2000) when pinpointing

the factors which change the people's culture. Crystal (2000) considered the circles of influence, of one culture on the other, to have become wider and wider. The language of the dominant culture infiltrates everywhere in three broad stages (Ibid). According to Crystal (2000), the first is large pressure, which can come from political, social, or economic sources, on the people to speak the dominant language. Regardless of the source of the pressure, the second stage is a period of emerging bilingualism. Additionally this bilingualism starts to decline, with the old language giving way to the new. Finally, the third stage turns up in which the younger generation becomes increasingly proficient in the new language, as mentioned by Crystal (2000), finding their first language less relevant to their new needs.

A variety of views did not agree on a tight definition of an endangered language (Blokland & Hasselblatt, 2003). Crystal (2000, p. 20) classified the degree of endangerment of a language through the interaction of a number of factors, among which are the size of the population and the community of speakers, the community's internal organization, and the way it perceives its own language, the position of the language as an identity marker and the number of children who learn it as their first language.

Cahill (1999) stated it simply enough, as mentioned by Headland (2004, p. 3), that a language is endangered "[when] it is in fairly imminent danger of dying out." Headland referred to two ways, which were stated by Cahill (1999), to quickly recognize when a language is on its way to death. One, shared also by Crystal

(2000), is when the children in the community are not speaking the language of their parents, and the other is when there are only a small number of people left in the ethnolinguistic community.

Wurm (1998, p. 192) gave a characteristic definition, as cited in Headland (2004), to the point that it is “when a language is moribund”, meaning that it is no longer being learned by children as their mother tongue. Grimes (2001) shared Wurm’s definition too. Nettle and Romaine (2000, p. 39) stated that “many languages are endangered that are not yet moribund.” Crystal’s (2000, p. 20) definition is more inclusive than Wurm’s: “spoken by enough people to make survival a possibility, but only in favourable circumstances and with a growth in community support”. Krauss’s (1992) definition is yet more inclusive: that all languages with fewer than 10,000 speakers are endangered. Only 600 of the world’s languages (less than 10%) are considered as “safe” from extinction, defined as those still being learned by children (Sampat, 2001; Whaley, 2003). Grimes (2001, p. 45) documented 450 languages spoken today “that are so small that they are in the last stages of becoming extinct, with only a few elderly speakers left in each one.”

Wurm (1998, 2003 p.192.), as cited in Blokland and Hasselblatt (2003, p. 112), proposed a typology of threat which includes five levels:

1. potentially endangered languages are socially and economically disadvantaged, under heavy pressure from a larger language, and beginning to lose child speakers;

2. endangered languages have few or no children learning the language, and the youngest good speakers are young adults;
3. seriously endangered languages have youngest good speakers of age 50 or older;
4. moribund languages have only a handful of good speakers left, most of whom are very old;
5. extinct languages have no speakers left. Accordingly, endangered languages tend to be used by their communities only rarely, being substituted by the dominant external language in the majority of its social functions.

Based on these criteria, one can affirm that the Mehri language is potentially endangered or seriously threatened, because there are only good native speakers (all of whom older than fifty) who still command all the aspects of the language; and it is beginning to lose child speakers. Arabic has become the prestige language inside the community due to its social and economic advantages. Actually, Mehri is spoken only by Mehri natives or by those who have learnt it as a second language. External factors, however, place all languages of Mahrah at a disadvantage. The prestige of Arabic is increasing, which tends to suppress all the minority languages in the region.

1.3.1.1 Jibbali

Jibbali is spoken in Dhofar, Oman. The number of speakers was estimated by Johnstone at about 5,000 (Johnstone, 1975, p. 94). However, Simeone-Senelle

(1997) estimated the total number at about 30-50,000. Traditionally, three dialect groups are distinguished: Eastern dialects (including the dialect of the al-Hallaniyyat Islands), Central dialects, and Western dialects (Johnstone, 1981). A dictionary of a Central dialect was published by Johnstone (1981). Two publications on Jibbali poetry have been published (Johnstone, 1972 and Morris, 1985).

1.3.1.2 Soqotri

Soqotri is spoken on the island of Soqatra. There are four dialect groups: the dialects spoken on the north coast, the dialects spoken on the south coast, the dialects spoken by Bedouins in the mountains in the centre of the island and the dialect spoken on Abd al-Kuri. The dialect spoken on the island Samha seems to be the same as the one on the west coast of Soqatra. The inhabitants of Soqatra are estimated at 50,000, those of Abd al-Kuri at about 250 and those of Samha at ten or a dozen Simeone-Senelle (1997, p. 379) following Naumkin (1988, pp. 342-359). In 1938, Leslau (1938) published a dictionary on Soqotri. Recently, more research has been carried out on the language and culture (Simeone-Senelle, 1997) and (Naumkin and Porchomovskij, 1981).

1.3.1.3 Bathari

Bathari is spoken in Oman on the coast facing the al-Hallaniyyat Islands, previously called the Kuria Muria Islands. Bathari is closely related to Mehri. The number of tribe members is estimated at about 300 (Morris, 1983) as cited in

Hofstede (1998). Not all of them speak Bathari; some of them speak only Mehri. The research carried out on this language is rather limited. The standard work on Bathari is written by Thomas (1937), but this should be treated with caution, as the transcription is sometimes misleading (Hofstede, 1998). Furthermore, Morris (1983) published an article discussing a Bathari poem. Some Bathari words were mentioned in Johnstone's Mehri Lexicon and Jibbali Lexicon (1981).

1.3.1.4 Harsusi

Harsusi is mainly spoken in the Jiddat al-Harasis, Oman. The estimated number of the Harasis is not more than about 600 (Johnstone, 1977). Simeone-Senelle (1997) suggested that the number was probably larger at the time of Johnstone's visit. Many Harasis had left the region to go and work in oil wells (Simeone-Senelle, 1997). The language is, like Bathari, closely related to Mehri. Johnstone (1977) published a dictionary of Harsusi and also Thomas (1937) gave some information about Harsusi.

1.3.1.5 Hobbyot

Hobbyot is spoken around the border between Yemen and Oman. The estimated number of speakers is less than 100. The language displays characteristics of both Mehri and Jibbali. Arnold (1993, p. 24), cited in Hofstede (1998), concluded in his article that it can be regarded as an independent language. A few Hobbyot words are mentioned in Johnstone's Mehri Lexicon and Jibbali Lexicon (1981).

1.3.1.6 Mehri

Mehri is the most widespread language, spoken nowadays by the Mahrah tribes (about 140,000 to 200,000 speakers) (Appleyard, 2002) and some Beyt Kathir, in the mountains of Dhofar in Oman, and in Yemen, in the far eastern governorate, on the coast, between the border of Oman and the eastern bank of Wadi Masilah; in the north-west of Yemen. Mehri is spoken as far as Thamud, on the border of the Rub'al-Khali (Simeone-Senelle, 1997). The Mehri variety in Oman is called Nagdi or Eastern Mehri (Mehruut), in the region of Dhofar in Oman. The other one in Yemen is called western Mehri (Mehruut), far east in the province of Mahra in Yemen (Simeone-Senelle, 1997). Speakers of Mehruut include all people in Mahra governorate except Hoaf, a town that links Mahra with Dhofar (Al-aidaroos, 1996). Western Mehri is subdivided into two groups: dialects spoken in the hinterland (Bedouins) and those spoken along the coast (villagers). This research will focus on the coastal dialect of Qishn, the former capital of the Mahra, which is very prestigious in Yemen (Ibid).

The Mehruut is in wide use in Qishn region, from Etab to Haswayn in the west to Ras Fartak in the east, in the towns and villages of the mountains and coastal plains such as Seihut (Ali, 1989). Mehruut is still a distinct entity and understood by many people in the region of Qishn, especially the older people. This is because while a very short time ago Mehruut was the spoken language of communication in certain quarters of Al-Mahrah, particularly the isolatable Qishn and its outskirts; it was the main language of communication between the MSA

native speakers and those who lived with them who spoke one or other language or dialect in Al-Mahrah.

1.4 The Writing System of MSA

The MSA languages possess a rich oral tradition, but not a written tradition. According to Hofstede (1998), presently, there exist two systems for writing the languages: one is the Arabic alphabet; the other is a modified Latin alphabet. Hofstede (1998) explained that the system, in which the Arabic alphabet is used, has two variants. In the most commonly used variant, only unmodified Arabic letters are used. This leads sometimes to problems as some letters are used for two phonemes. Users of this system are aware of this problem. Also the way in which Arabic vowels are written does not suffice for the wide variety in the MSA languages.

In the other variant, a modified Arabic alphabet is used. Dots are added to or omitted from an original Arabic letter (Ibid). The system for vowels is the same as in the first variant. One example of this kind of system is given in Simeone-Senelle and Lonnet (1985). Attempts to create such a system have come from native speakers and non-native speakers. Even in this modified system it is sometimes not possible to have a one-to-one representation. For example, it does not provide a letter for the Central Jibbali phonemes. (Ibid). Two other problems: the system is not standardized; and it is not always understood by outsiders.

At present, only the first, unmodified, system is used in publications and other writings. The second system, the modified Latin script, is the result of the mixture of modified Latin letters and IPA (Hofstede, 1998). There are some differences between languages/dialects with regard to occurring vowels and consonants. Eight colours of short vowel are distinguished (Ibid, Simeone-Sennele, 1997). Special graphs are used to mark labialized and lateral variants of dental obstruents, and diacritics for ejective and fricative consonants, as well as for nasalized, long and accented vowels. This system is now standardized. But, depending on the purpose of an article, one can decide to use a more phonetic script, i.e. closer to IPA, or a more phonological script, i.e. one closer to the Latin script (Ibid).

The choice between the Arabic and the modified Latin alphabet depends on the circumstances. The (unmodified) Arabic alphabet is used by the native speakers, and in publications written in Arabic. The modified Latin alphabet is used in publications which are not written in Arabic.

1.5 The Statement of the Problem

It is widely agreed that about half of the 6,500 languages spoken in the world today (Lehman, 1996; Ostler, 1999; Miyaoka, 2001; Whaley, 2003; Headland, 2004) are endangered to some degree. Due to the impact of urbanization, the spread of global communications, migration, government policies, and people's negative evaluations of their languages and traditions, an increasing number of languages are no longer being learnt by children (Ibid). Today 96% of

the world's population speaks just 4% of the languages, meaning that the vast bulk of languages have small and diminishing speech communities (Whaley, 2003). If nothing is done, most of these languages will become extinct within this century (Lehman, 1996; Ostler, 1999; Crystal, 2000; Whaley, 2003; Headland, 2004)

In 1992, the International Linguistics Congress in Quebec issued the following statement as cited in Crystal (2000, p. vii) and Janse and Tol (2003, p. xiv):

As the disappearance of any one language constitutes an irretrievable loss to mankind, it is for UNESCO a task of great urgency to respond to this situation by promoting and, if possible, sponsoring programs of linguistic organizations for the description in the form of grammars, dictionaries and texts, including the recording of oral literatures, of hitherto unstudied or inadequately documented endangered and dying languages.

UNESCO responded by the adoption of 'Endangered Languages Project' – including the 'Red Book of Endangered Languages' – in November 1993 (Lehman, 1996). UNESCO, later on, published a report observing (Ibid):

Although its exact scope is not yet known, it is certain that the extinction of languages is progressing rapidly in many parts of the world, and it is of the highest importance the linguistic profession realize that it has to step up its descriptive efforts.

Annamalai (2000) reported that the Unesco recognized that the responsibility for action towards maintenance of languages lie with the Government, the Non-governmental Organizations, the Market, the Community, the Individual and the International bodies. Dixon's view (1997, p. 144) of what needs to be done was stated in Newman (2003, p. 3) "The most important task in

linguistics today – indeed, the only really important task – is to get out in the field and describe languages, while this still can be done ...”.

MSA research confronts several difficulties such as the recent discovery of these languages and the unavailability of any document dating back to before 1835 (Simeone-Sennele, 1999; Al-Mashani, 1999) when Soqotri was first discovered. Then the discovery of other MSA followed up until the 70s of the last century when Johnstone (1975) announced the existence of Hobyot language in Dhofar. Finally, the French expedition discovered the sixth Modern South Arabian language in the Yemeni region (Simeone-Sennele, 1999). There is not enough information about the nature of the social, economic, intellectual, and literary life in Mahrah in ancient times.

Research on the MSA languages is characterized to be on pace with the rapid influences exerted on these languages through their increasing connection with classical and colloquial Arabic, which is used for communication between the MSA natives and the Arabic speakers from Yemen and other Arab countries. Moreover, Arabic is the medium of instruction in schools and universities and it is used for communication between speakers of different languages. Therefore, it is not surprising that Arabic has a strong influence on the MSA languages. Versteegh (1997), Hofstede (1998) and Al-Aidaros (1999) identified the threatened current state of MSA languages for the time being as they represented isolated forms that were never touched by Arabic influence until the modern period. This situation makes MSA more threatened to be extinct due to different factors: the spread of

media, governmental and private education, and transport (Al-Aidarooos, 1999) that are supported by the Yemeni government. Those facilities interconnected the far-reaching areas with the main cities. All these factors, as they have been elaborated before by Crystal (2000), work in helping the Arabic language to strongly influence the mother tongue of MSA natives; and to restrict and narrow down (Simeone-Senelle, 1999) the geographic stretches and domains in which MSA are utilized. Classical Arabic and its dialects have gradually supplanted and disinherited these regional languages. As is now obvious, it is currently in the process of eradicating all linguistic traces of any of the ancient languages in the southern parts of the Arabian Peninsula. Thus Mehriit, the focal point of the current study, is threatened with extinction owing to the advancement of classical Arabic via the mass media and education.

According to Simeone-Senelle (1999), an MSA child, at age 7 or 8, must be ushered into the highly developed modern world in which he/she is compelled to use his/her mother tongue discontinuously. This may make him/her lose the ability to use it spontaneously and naturally at home. In consequence, Crystal (2000) expected that children stop talking to each other outside the home in their language and that within a generation - sometimes within a decade – “a healthy bilingualism within a family can slip into a self-conscious semilingualism and thence into a monolingualism which places that language one step nearer to extinction.” (Crystal, 2000, p. 79). Documenting these languages becomes essential and critical and the extinction of which may lead to the loss of part of Yemen’s legacy, which is a part of the Arabian Peninsula’s legacy and all
